

# SaaS Platform for Hybrid Multicloud Monitoring & Management

## UNITYONE FOR YOUR HYBRID MULTICLOUD ENVIRONMENT

UnityOne is a Hybrid Multicloud Management SaaS Platform for managing your real hybrid cloud environment, including data centers, power distribution units (PDUs), bare-metal servers, networking devices, private clouds (VMware, Hyper-V and OpenStack), and public clouds (AWS, Azure, GCP and OCI). UnityOne is a single pane of glass that provides Hybrid Multicloud observability, monitoring, management, auditing, support, and automation.

# UnityOne Manages Your Infrastructure Anywhere

## BENEFITS

### Multi-Vendor Management

A common management platform for all your clouds in one place. It provides required visibility and management capabilities that enable you to have interconnections between different clouds and the needed visibility of the workloads.

### Compliance Management

Create robust compliance, risk, and governance reports automatically across different audit frameworks across different compliance standards (30+ standards) spread across different clouds and infrastructure.

### Cloud Security Management

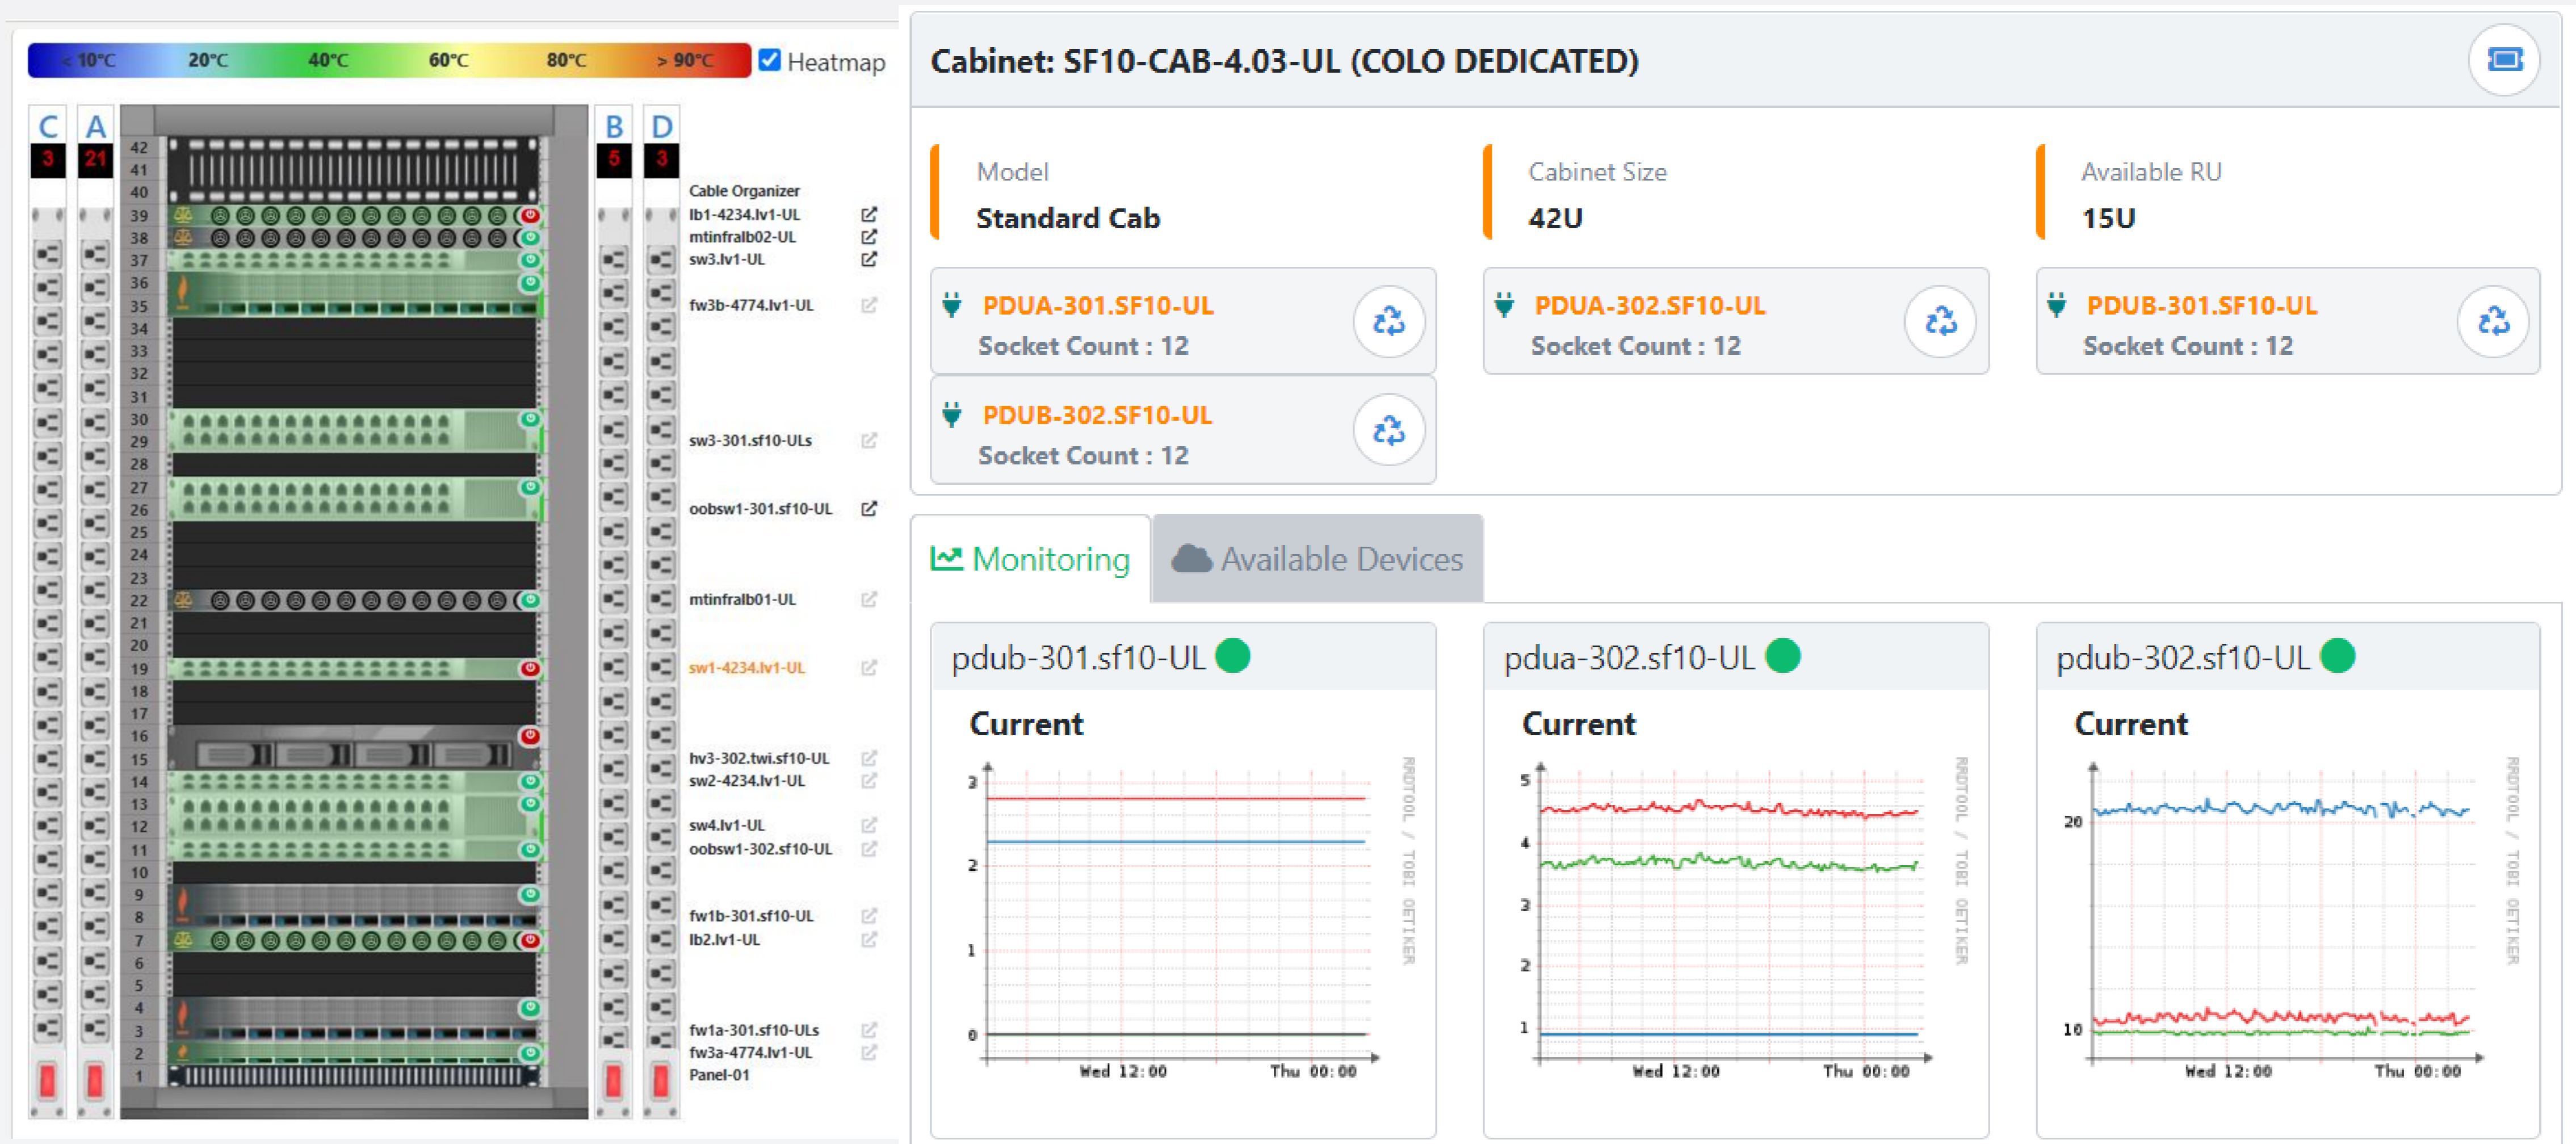

It has a service delivery mechanism for delivering security standards, e.g., SOC, NIST. It can also deploy continuous scanning of workloads and assets and automatically raise a remediation flag to audit to any security standards.

### Cost Management

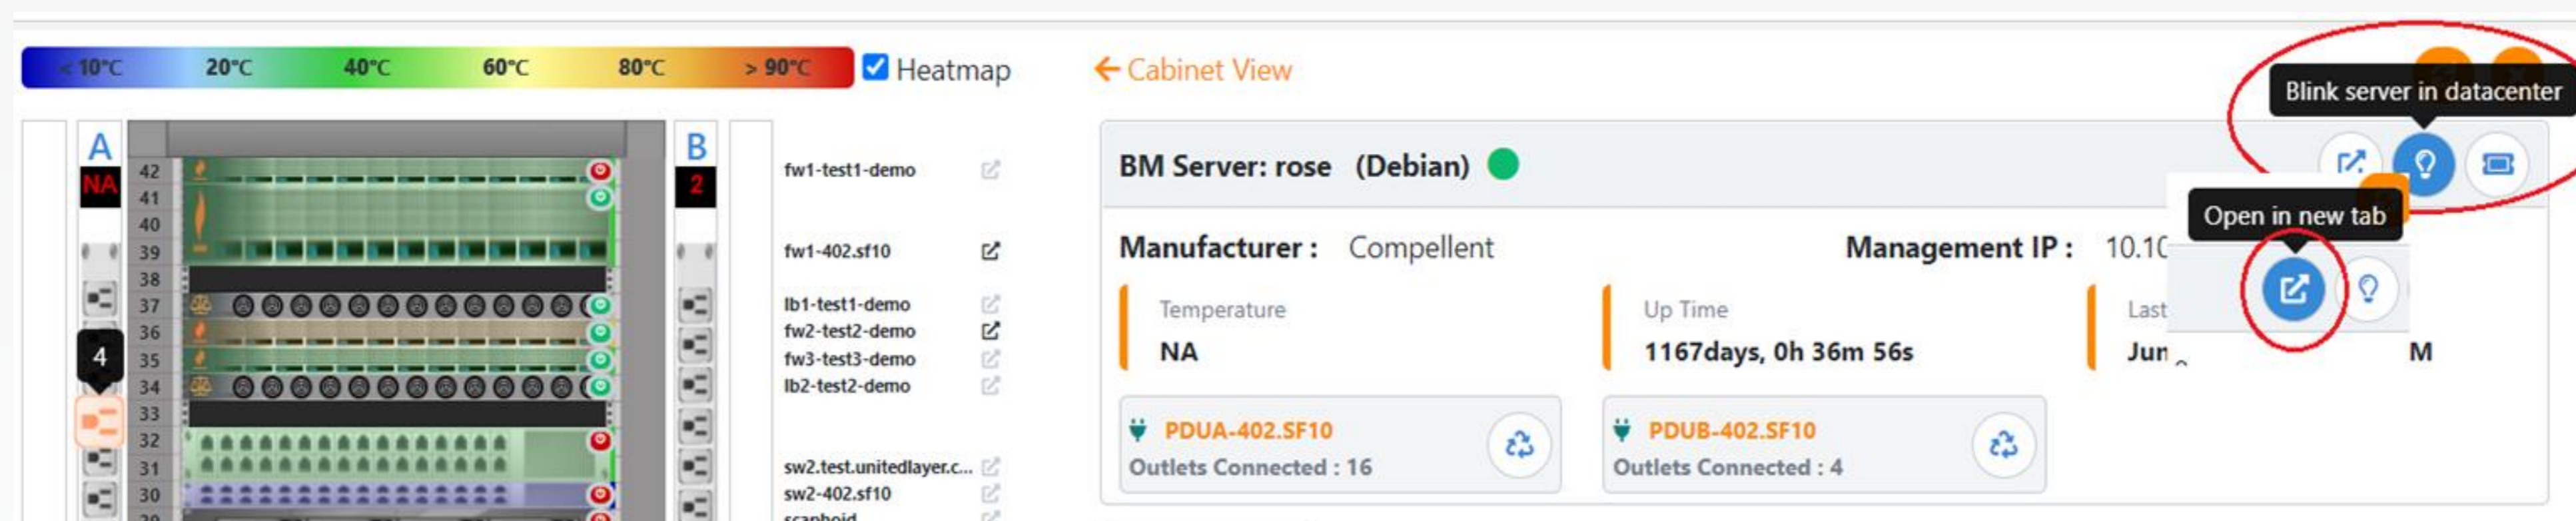

UnityOne helps organizations by providing them with visibility into their infrastructure costs per footprint and per region through a sophisticated tool.

# Data Center Monitoring And Observability

Visualize your Data Center cabinets to enhance information in ways that make sense to get more out of your data. Get comprehensive real-time observability into your Data Centers and Hybrid Multicloud Infrastructure through interactive widgets, utilization charts, and live status. Practice effective use of space, power, and cooling capacity based on real-time data.

Understand your data center's health and capacity thresholds in one single view and manage all your devices via SSH/RDP/Web. Improve your uptime and take Informed capacity planning decisions by managing and recycling your PDU's remotely on a single click.

Improve your technician's efficiency by using device blinker to remotely identify the cabinet's device and perform remote engineering tasks.

# Hybrid MultiCloud Monitoring & Management

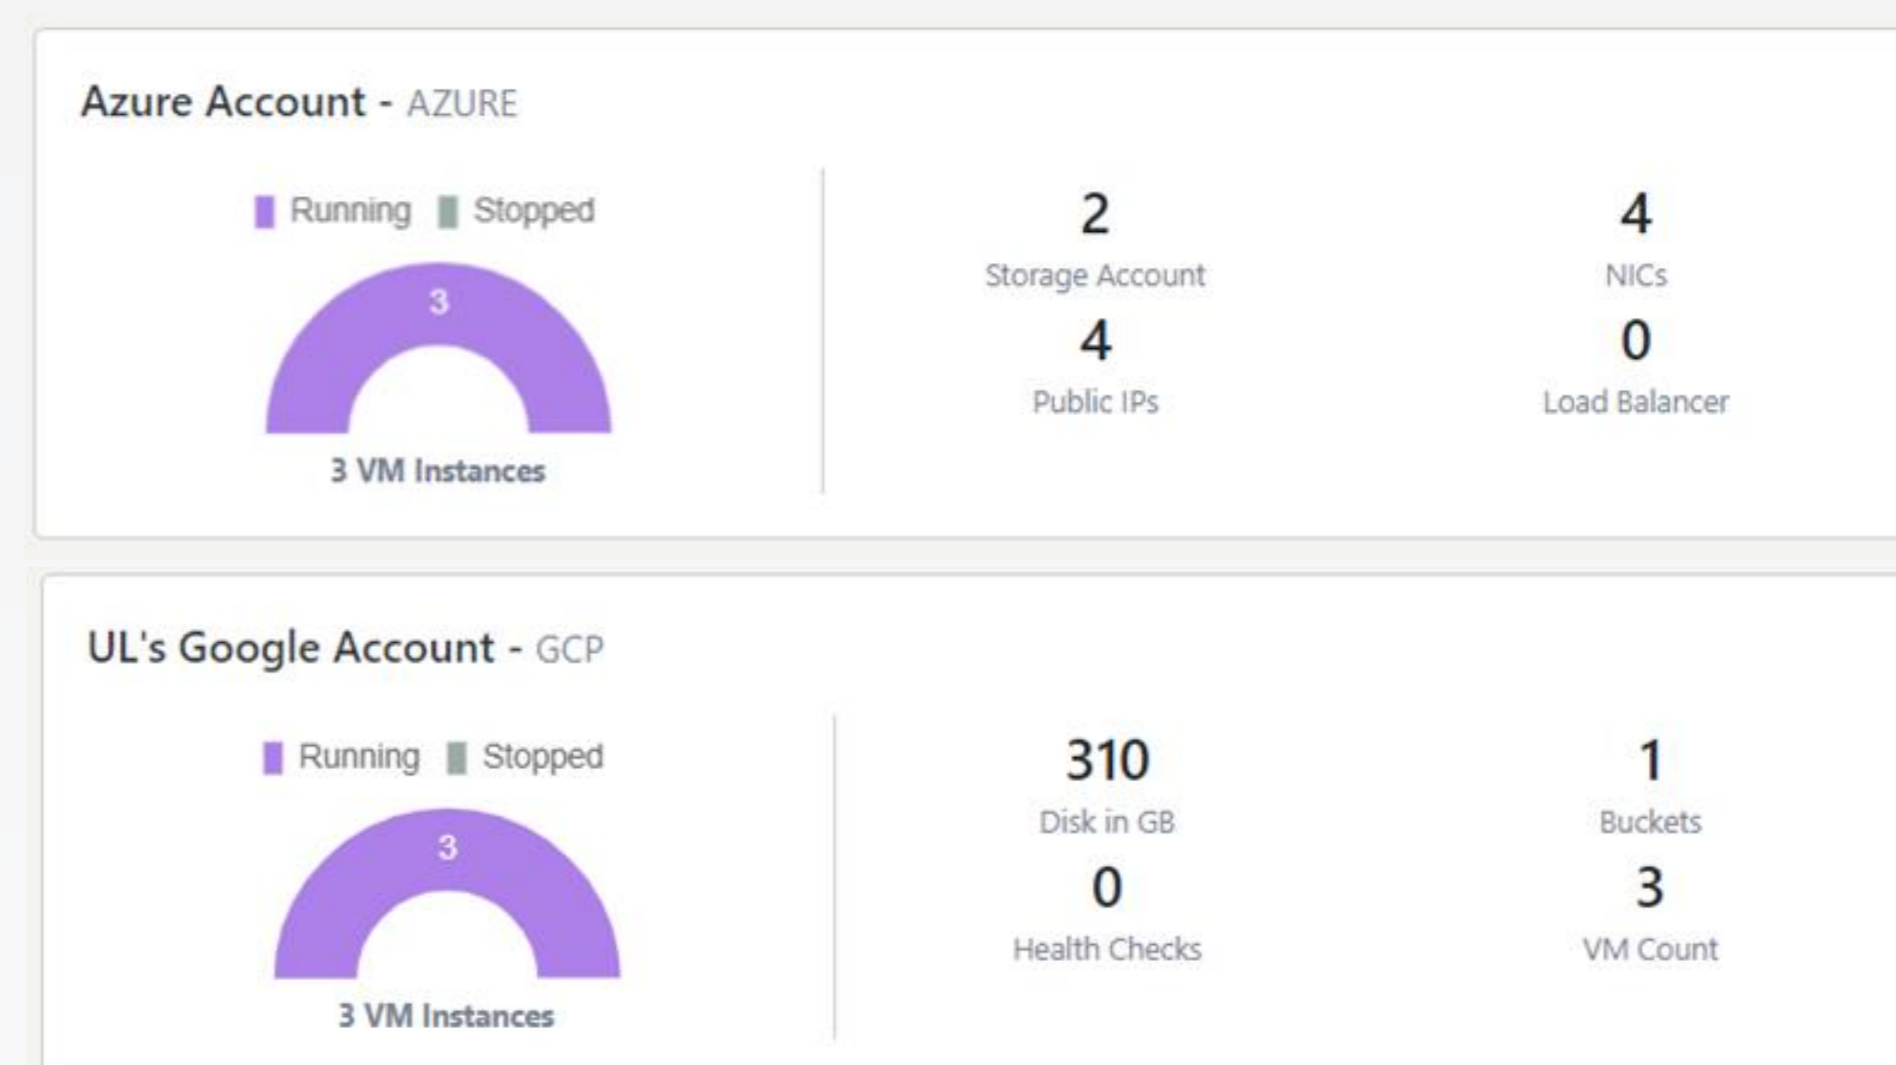

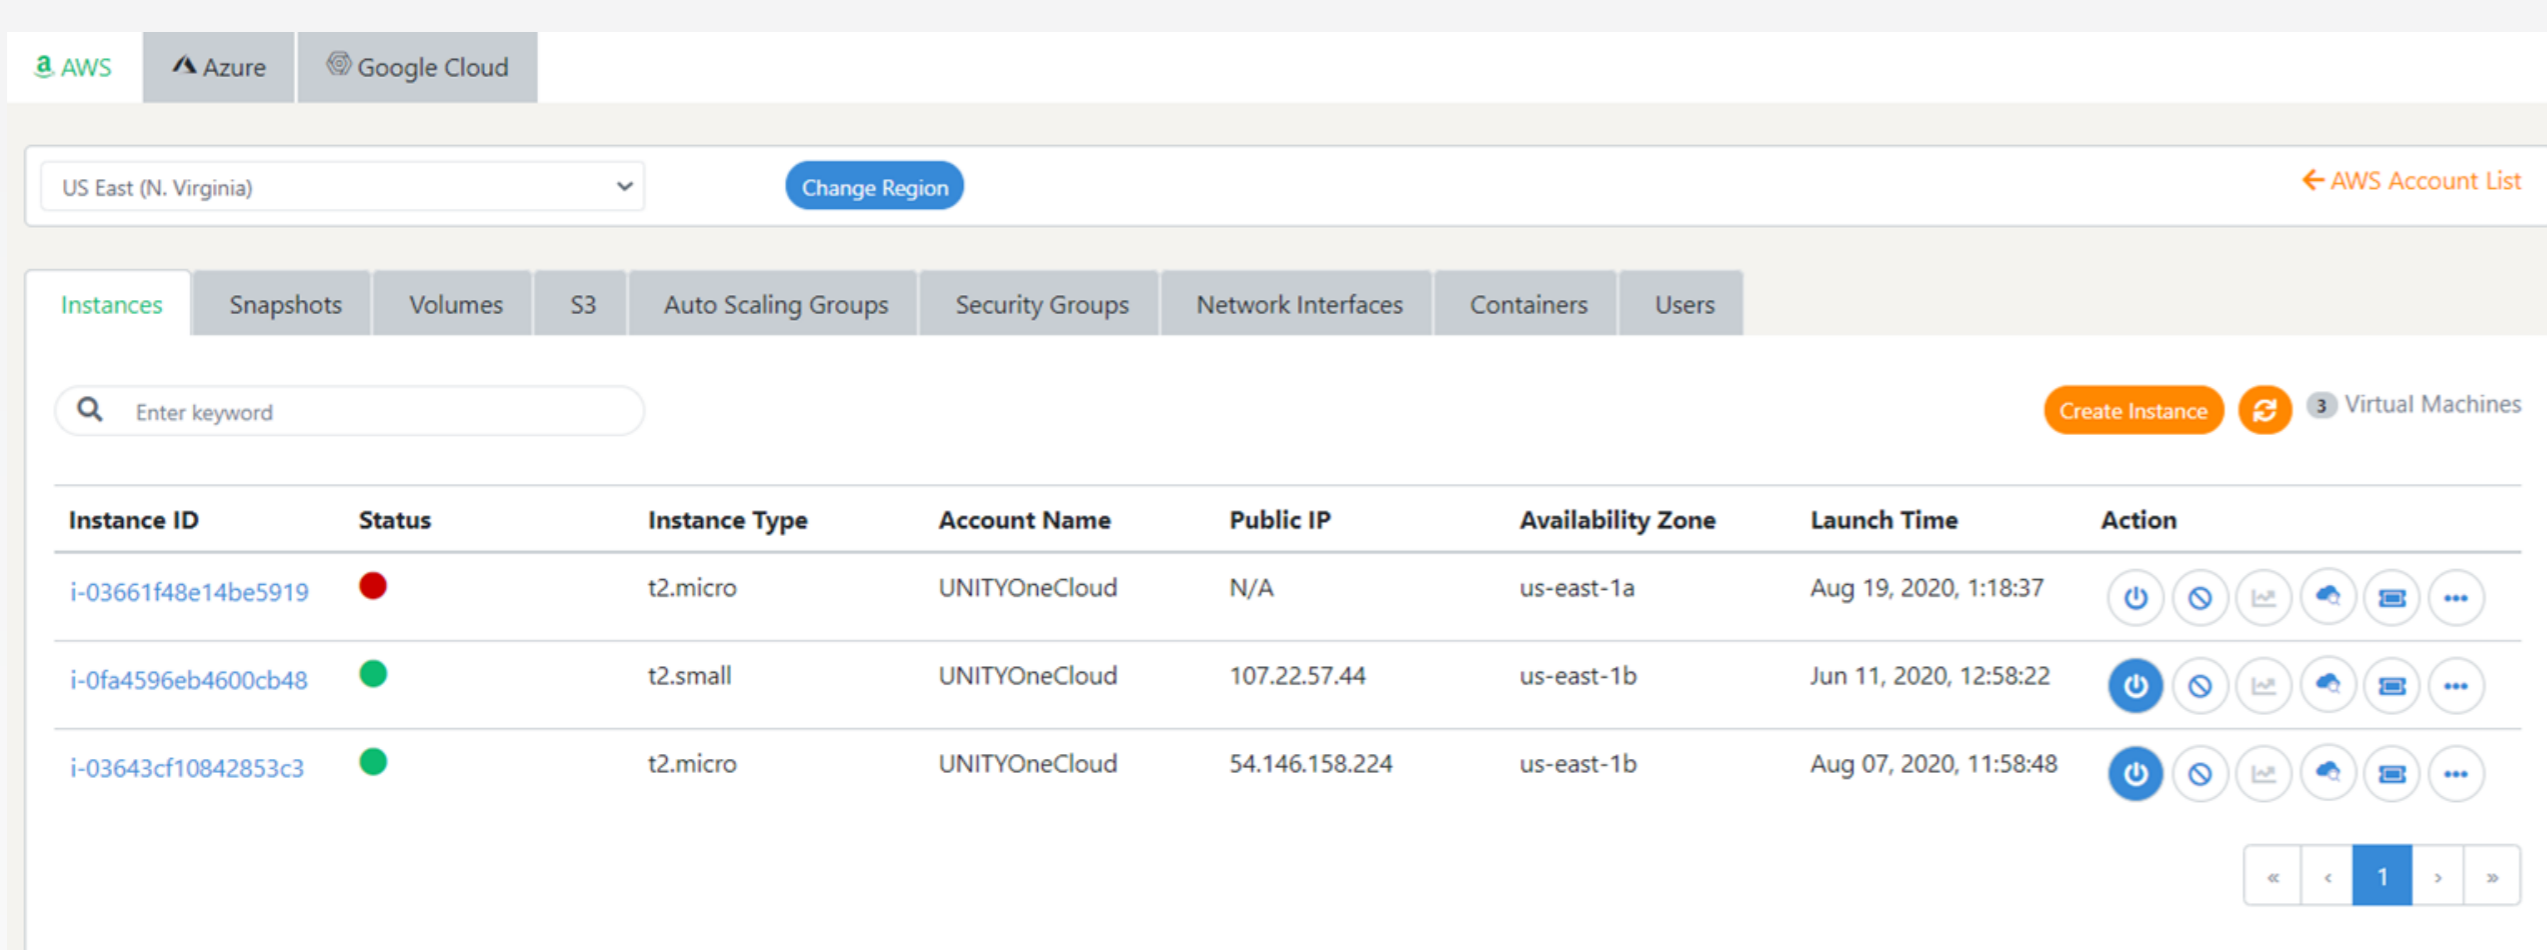

## Private Cloud

Reduce costs, improve infrastructure efficiency, and close security holes through unified visibility into all your Private Clouds like VMware, OpenStack, OVM, Hyper-V, etc. worldwide.

Optimize your resource and service usage to keep cloud costs down by managing your cloud components like Virtual Machines, Hypervisors, Storage, etc. via Console & Web.

## Public Cloud

Get a comprehensive view of all your Public Clouds like AWS, Azure, GCP and OCI across the regions. Integration of Public Clouds to UnityOne enables you to perform all kinds of actions like provision/termination of resources on Public Cloud via UnityOne.

The Public Cloud Monitoring feature enables you to monitor your Public Cloud instances via UnityOne monitoring.

## UnityOne.AI Advantage

UnityOne is a Hybrid Multicloud Management SaaS Platform for managing your Real Hybrid Cloud Environment, including Data Centers, Power Distribution Units (PDUs), Bare-Metal Servers, Networking Devices, Private Clouds (VMware, HYper-V, and OpenStack), and Public Clouds (AWS, Azure, GCP and OCI).
