

# AI-Driven Hybrid/Private Cloud Management

Powered by

# Hybrid Cloud Orchestration for Maximum Business Value with AI

UnityOne.AI is innovating the way enterprises manage hybrid cloud environments across the globe in different industries.

## **Multicloud Discovery**

Gain instant visibility across public, private & hybrid clouds

## **Multicloud Management**

Control diverse cloud environments from a unified dashboard

## **GenAI-Driven Workflow Orchestration**

Slash manual effort, and resolve issues swiftly with AI-powered automation

## **DevOps Automation & Orchestration**

Accelerate innovation with automated CI/CD, event-driven workflows, and streamlined deployments

## **Kubernetes & Microservices Management**

Unified discovery, health insights for containerized and microservices-based apps

## **Self Service Catalog**

Empower teams with fast, policy controlled self-service provisioning of cloud resources

## **Policy Driven Resource Management**

Govern usage intelligently to reduce waste, control costs, and minimize operational risk

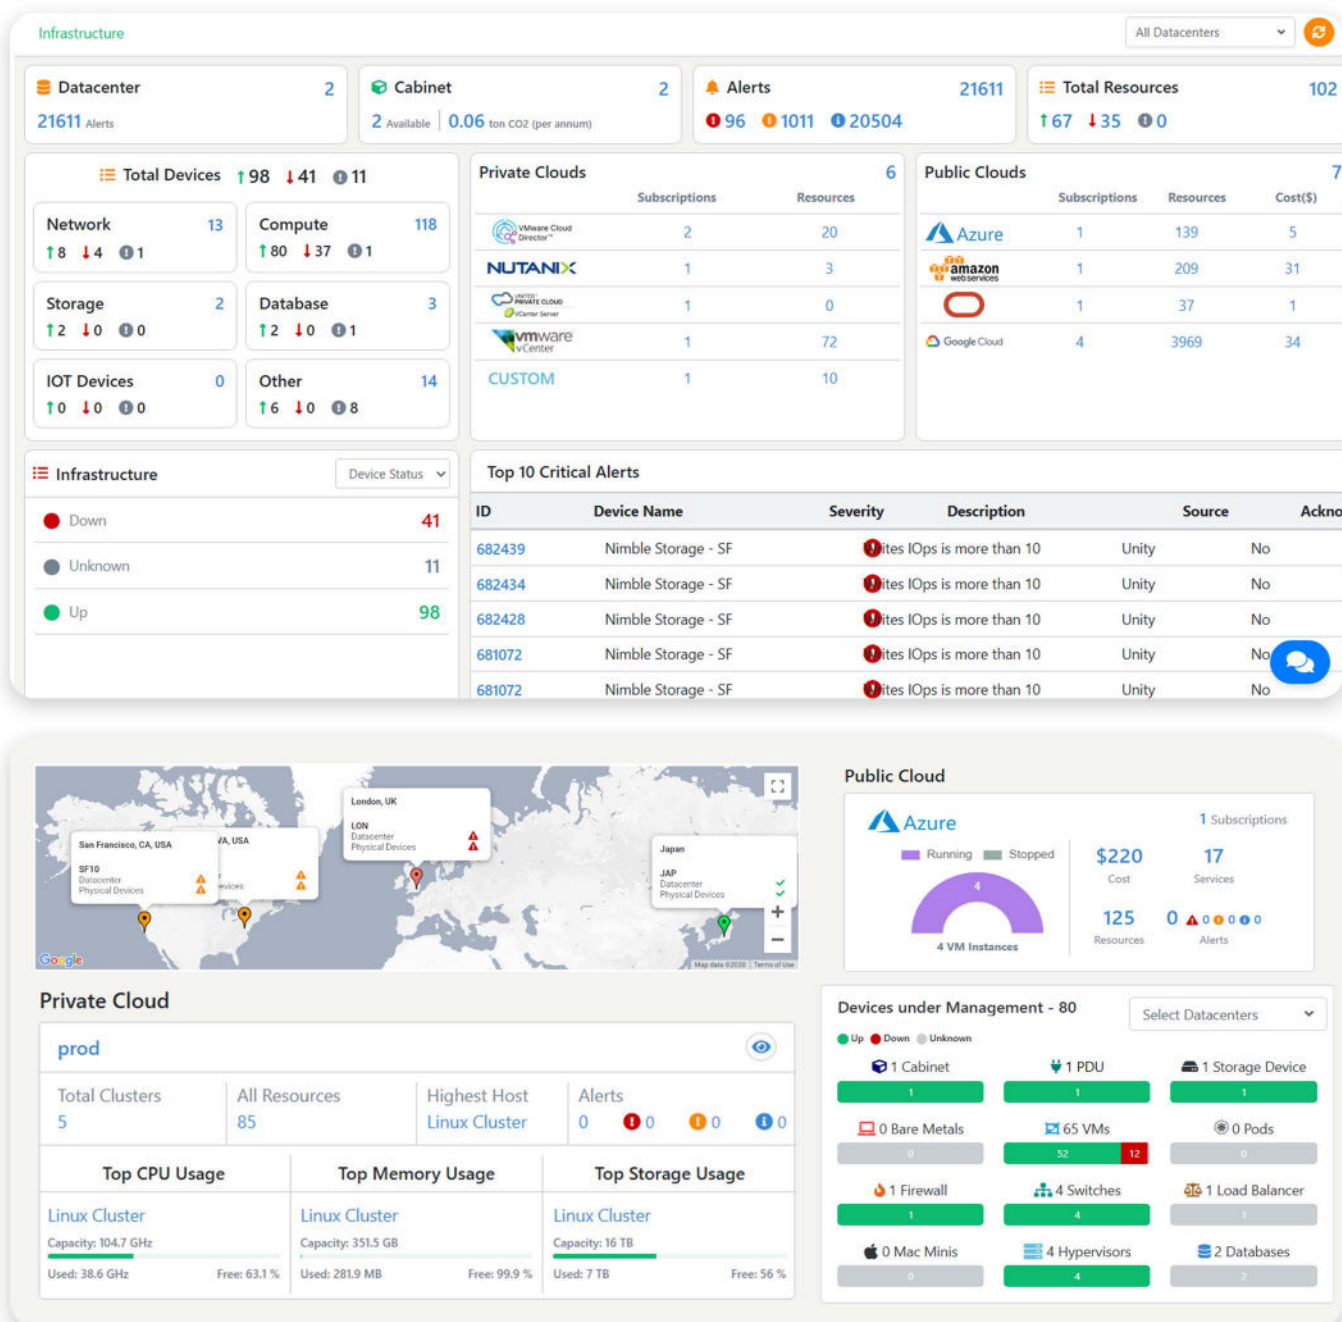

## **OS Vulnerability & Compliance**

Continuously scan for OS vulnerabilities and automate compliance checks

# Multicloud Discovery & Management

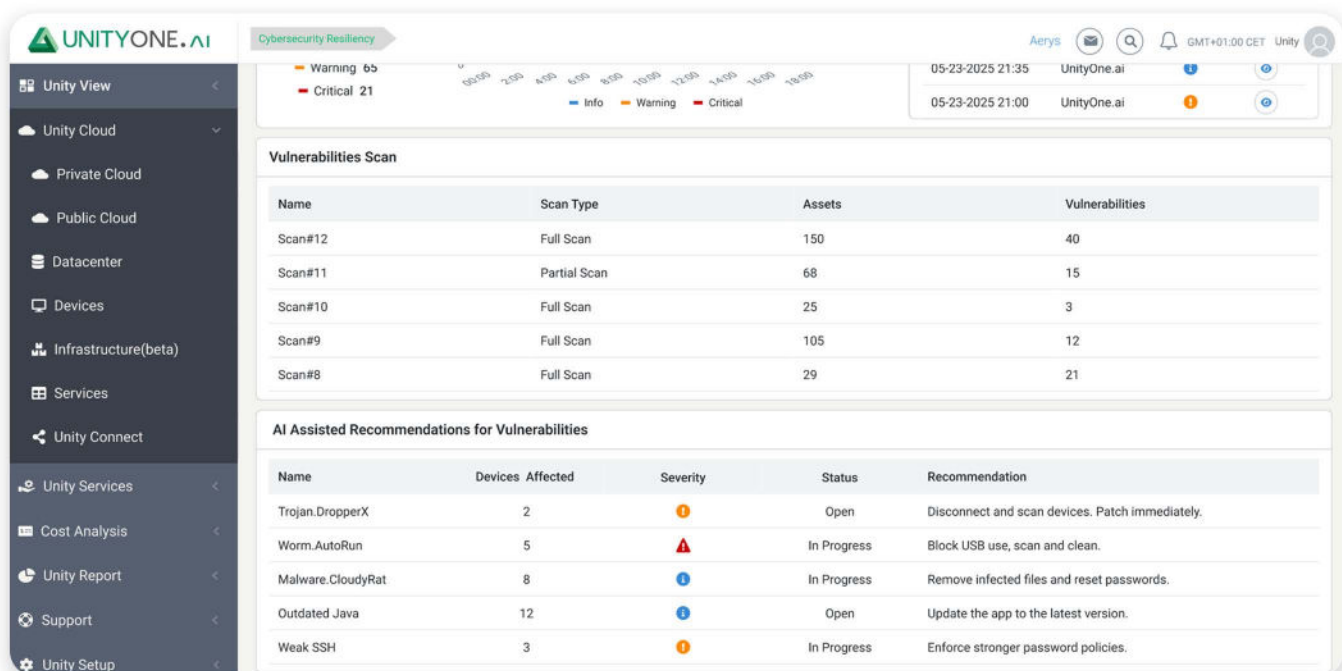

Achieve comprehensive visibility across your diverse cloud environments through a unified dashboard that enables seamless monitoring, analysis, and management of critical cloud resources.

Simplify operations by automating workload discovery, detecting device failures, and leveraging AI-driven resource reconfiguration—gaining complete visibility and performing intelligent automation across complex hybrid/private cloud environments.

# OS Vulnerability & Compliance

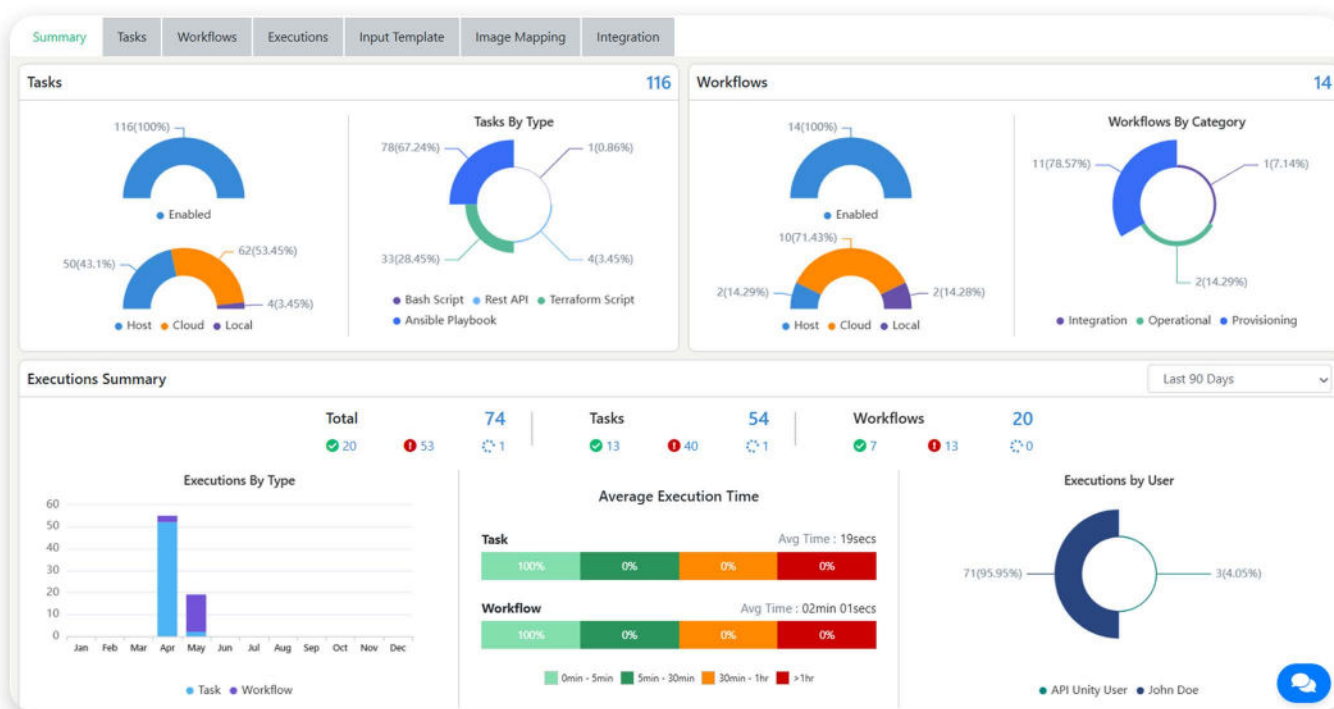

Automatically detect, prioritize, and remediate OS vulnerabilities with continuous, real-time monitoring and reporting.

Generate detailed reports with actionable insights for remediation, empowering end-users to make informed decisions and deliver improved security resilience.

# DevOps Automation & Orchestration

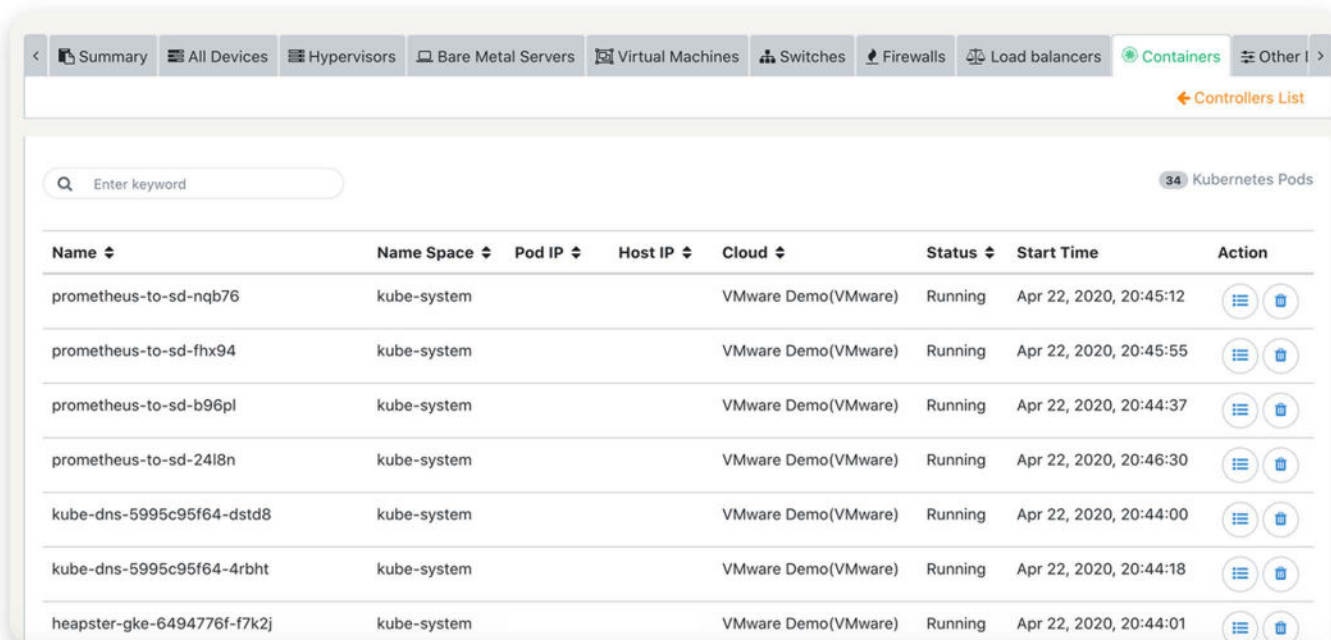

Streamline operations with workflow automation powered by our orchestration engine and secure role-based access control.

Execute workflows using supported task types like Python, Ansible, REST API, Shell, and Bash, and track execution status, duration, and outputs through an intuitive, centralized dashboard.

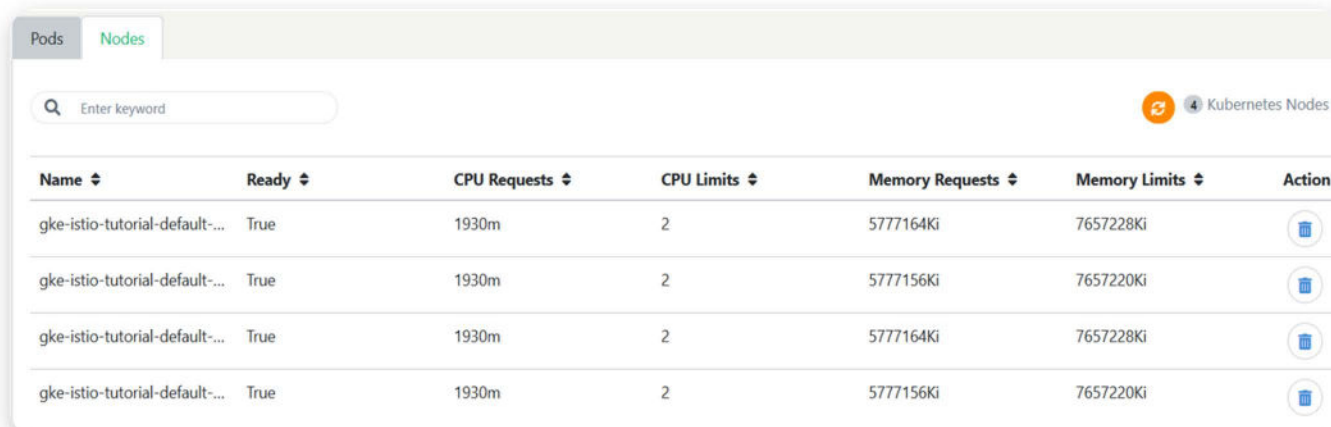

# Kubernetes & Microservices Management

Achieve deep visibility into your Kubernetes clusters with real-time monitoring and analytics.

The screenshot shows the 'Containers' tab selected in a navigation bar. Below the navigation bar is a search bar with the placeholder 'Enter keyword'. To the right of the search bar, it says '34 Kubernetes Pods'. The main content is a table with the following columns: Name, Name Space, Pod IP, Host IP, Cloud, Status, Start Time, and Action. The table lists several pods, all in a 'Running' status, within the 'kube-system' namespace on a 'VMware Demo(VMware)' cloud.

Name	Name Space	Pod IP	Host IP	Cloud	Status	Start Time	Action
prometheus-to-sd-nqb76	kube-system			VMware Demo(VMware)	Running	Apr 22, 2020, 20:45:12	 
prometheus-to-sd-fhx94	kube-system			VMware Demo(VMware)	Running	Apr 22, 2020, 20:45:55	 
prometheus-to-sd-b96pl	kube-system			VMware Demo(VMware)	Running	Apr 22, 2020, 20:44:37	 
prometheus-to-sd-24l8n	kube-system			VMware Demo(VMware)	Running	Apr 22, 2020, 20:46:30	 
kube-dns-5995c95f64-dstd8	kube-system			VMware Demo(VMware)	Running	Apr 22, 2020, 20:44:00	 
kube-dns-5995c95f64-4rbht	kube-system			VMware Demo(VMware)	Running	Apr 22, 2020, 20:44:18	 
heapster-gke-6494776f-f7k2j	kube-system			VMware Demo(VMware)	Running	Apr 22, 2020, 20:44:01	 

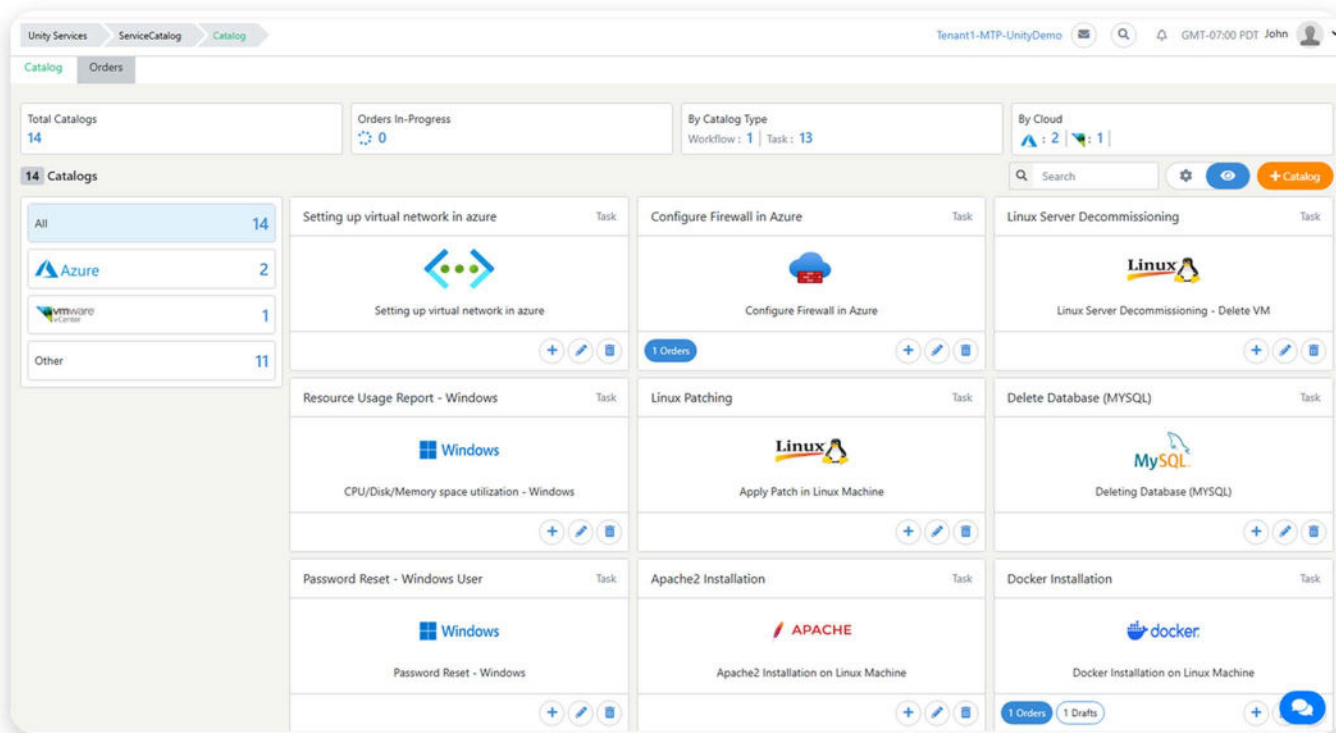

The screenshot shows the 'Nodes' tab selected in a navigation bar. Below the navigation bar is a search bar with the placeholder 'Enter keyword'. To the right of the search bar, it says '4 Kubernetes Nodes'. The main content is a table with the following columns: Name, Ready, CPU Requests, CPU Limits, Memory Requests, Memory Limits, and Action. The table lists four nodes, all in a 'True' ready state, with identical resource requests and limits.

Name	Ready	CPU Requests	CPU Limits	Memory Requests	Memory Limits	Action
gke-istio-tutorial-default-...	True	1930m	2	5777164Ki	7657228Ki	
gke-istio-tutorial-default-...	True	1930m	2	5777156Ki	7657220Ki	
gke-istio-tutorial-default-...	True	1930m	2	5777164Ki	7657228Ki	
gke-istio-tutorial-default-...	True	1930m	2	5777156Ki	7657220Ki	

Experience simplified K8s orchestration, troubleshooting, and resource optimization across hybrid environments.

# Self Service Catalog

Rapidly provision and automate a variety of tasks and workflows using our customizable self-service catalog.

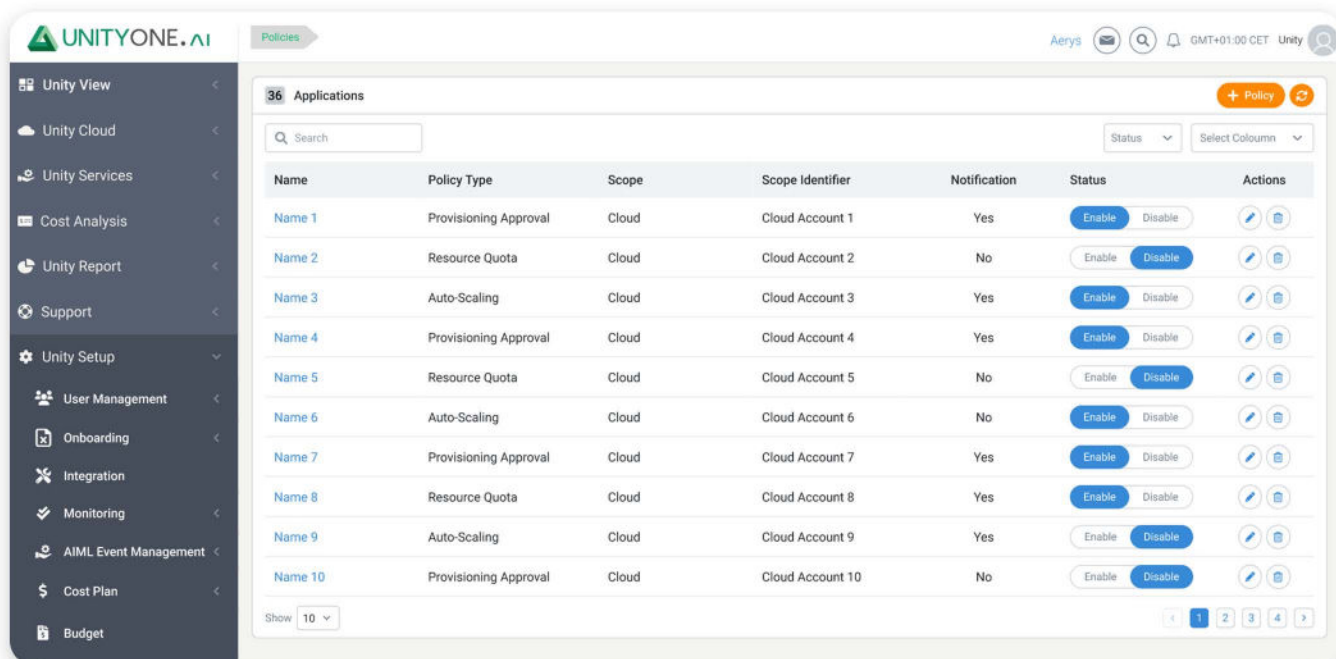

Empower users to initiate operations such as VM provisioning, backup configuration, firewall management, server setup, and health checks—all securely governed by role-based access control and optional approval workflows to maintain compliance.

# Policy Driven Resource Management

Achieve automated, policy-driven resource allocation and optimization using customizable scripts such as Ansible, Terraform, Bash, Python, and more.

The screenshot displays the UnityOne.AI interface, specifically the 'Policies' section. A sidebar on the left contains navigation links: Unity View, Unity Cloud, Unity Services, Cost Analysis, Unity Report, Support, Unity Setup, User Management, Onboarding, Integration, Monitoring, AML Event Management, Cost Plan, and Budget. The main content area is titled '36 Applications' and features a search bar, a status dropdown, and a 'Select Column' dropdown. Below these is a table with 10 rows of application data. Each row includes a name, policy type, scope, scope identifier, notification status, and status controls (Enable/Disable buttons). The 'Status' column shows 'Enable' and 'Disable' buttons, with 'Disable' being active for most entries. The 'Actions' column contains edit and delete icons. At the bottom of the table, there is a 'Show 10' dropdown and a pagination bar with numbers 1, 2, 3, 4.

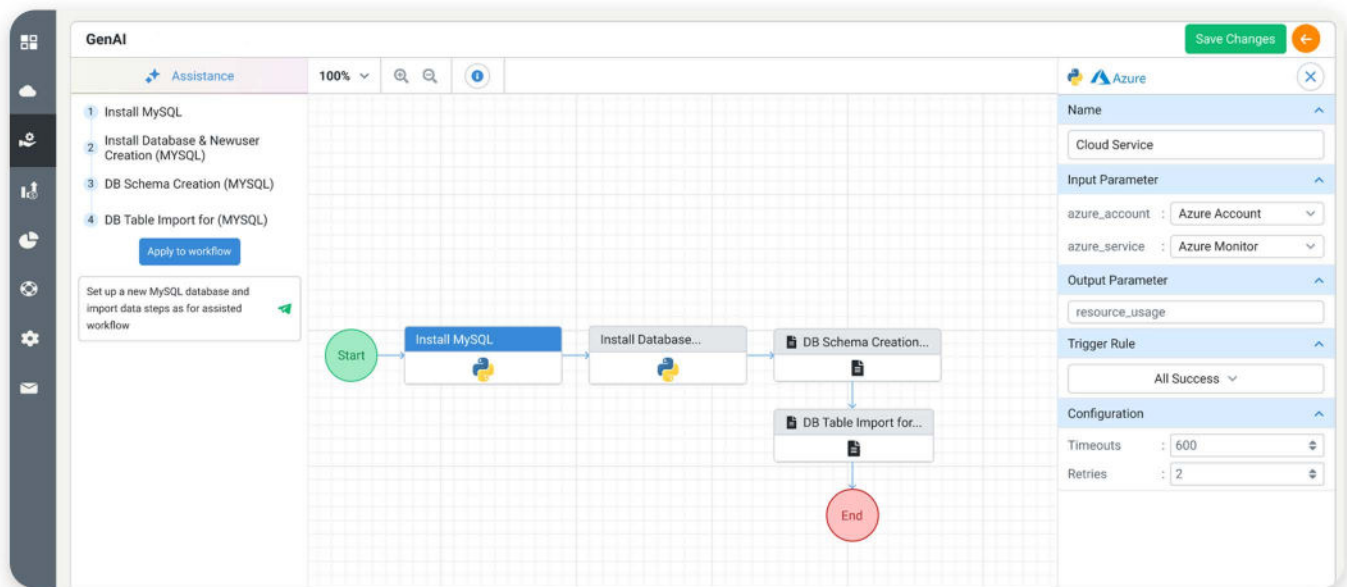

Name	Policy Type	Scope	Scope Identifier	Notification	Status	Actions
Name 1	Provisioning Approval	Cloud	Cloud Account 1	Yes	Enable Disable	 
Name 2	Resource Quota	Cloud	Cloud Account 2	No	Enable Disable	 
Name 3	Auto-Scaling	Cloud	Cloud Account 3	Yes	Enable Disable	 
Name 4	Provisioning Approval	Cloud	Cloud Account 4	Yes	Enable Disable	 
Name 5	Resource Quota	Cloud	Cloud Account 5	No	Enable Disable	 
Name 6	Auto-Scaling	Cloud	Cloud Account 6	No	Enable Disable	 
Name 7	Provisioning Approval	Cloud	Cloud Account 7	Yes	Enable Disable	 
Name 8	Resource Quota	Cloud	Cloud Account 8	Yes	Enable Disable	 
Name 9	Auto-Scaling	Cloud	Cloud Account 9	Yes	Enable Disable	 
Name 10	Provisioning Approval	Cloud	Cloud Account 10	No	Enable Disable	 

Choose from predefined parameters or tailor your policies to fit business requirements. Receive immediate notifications of any policy violations via SMS or email to ensure timely awareness and compliance.

# GenAI-Driven Workflow Orchestration

Simply describe your goal, and then AI will interpret the intent, along with relevant task suggestions, and automatically generate workflows, leading to minimized manual effort.

Incorporate AI-driven components that make autonomous decisions, adapt to changing contexts, and perform actions independently, enabling dynamic workflows that evolve with your changing business needs.

# Reimagine Hybrid IT with AI Capabilities

Recognized as a Product Challenger in the ISG Provider Lens™ 2025 Private/Hybrid Cloud – Data Center Services for highest portfolio attractiveness, UnityOne.AI has simplified hybrid cloud management with integrated AI capabilities.

## Comprehensive Multicloud Visibility

A single dashboard provides seamless monitoring and management across public clouds (AWS, Azure, GCP, OCI), private clouds (VMware, OpenStack), data centers, and edge resources with 800+ APIs enabling easy integration.

## AI/ML-Powered Event Management

Advanced anomaly detection, automated root cause analysis, and event correlation effectively reduce downtime and alert fatigue by focusing on critical incidents before escalation.

## Agentic Workflow Orchestration

Beyond traditional automation, UnityOne.AI's agentic intelligence enables self-directed, autonomous workflows that adapt dynamically to changing contexts and operational needs, accelerating innovation with less manual effort.

## Policy-Driven Resource Optimization

Customizable policies using scripting languages (Ansible, Terraform, Python, Bash) automate resource allocation, instantly triggering alerts for violations to ensure compliance and cost efficiency.

## Enhanced Security & Compliance

Continuous real-time monitoring and automated remediation safeguards against vulnerabilities, helping sustain robust security posture and regulatory adherence.

## Cost and Sustainability Management

Integrate data across clouds to unlock financial oversight, drive FinOps and GreenOps with sustainability metrics, such as global carbon footprint and power usage effectiveness (PUE), aligning IT operations with environmental goals.
