

# Advanced AI-Powered Observability Platform

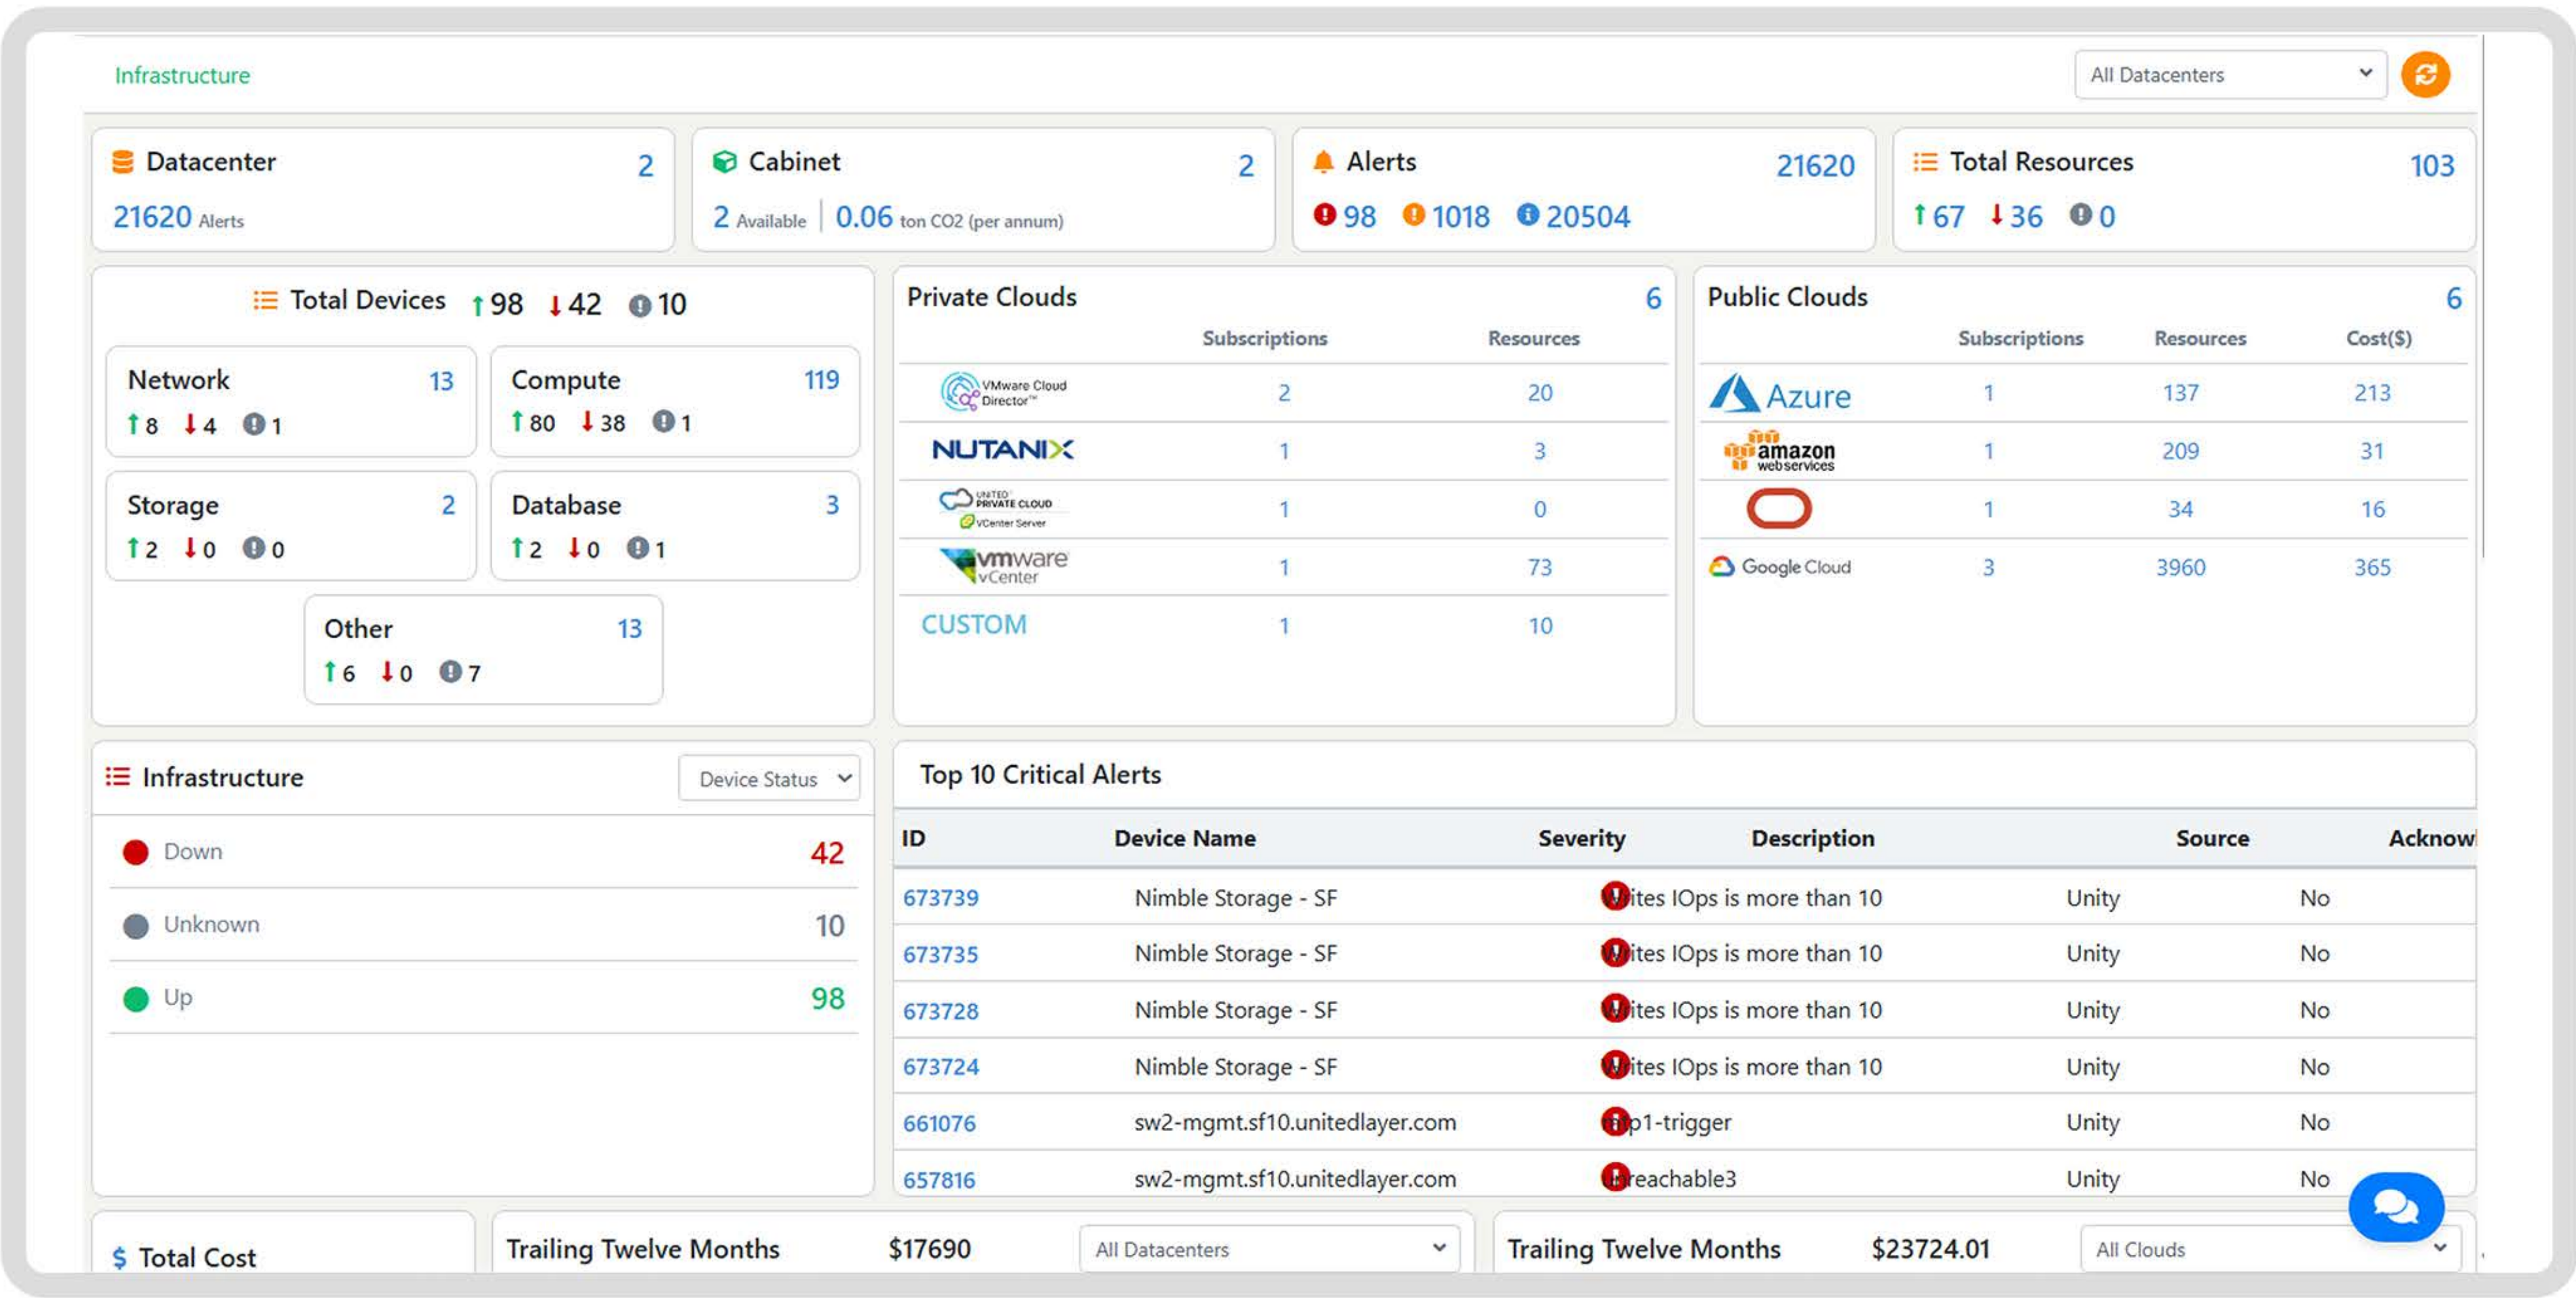

Powered By

# Infra Observability

Get real-time visibility across your entire IT operations—from servers and networks to storage and GPUs—enabling proactive monitoring, faster resolution, and improved operational efficiency.

## Unified Dashboards

Monitor your entire IT stack in real time with customizable dashboards. Detect anomalies early and ensure uptime with AI-powered, full-stack visibility across all environments.

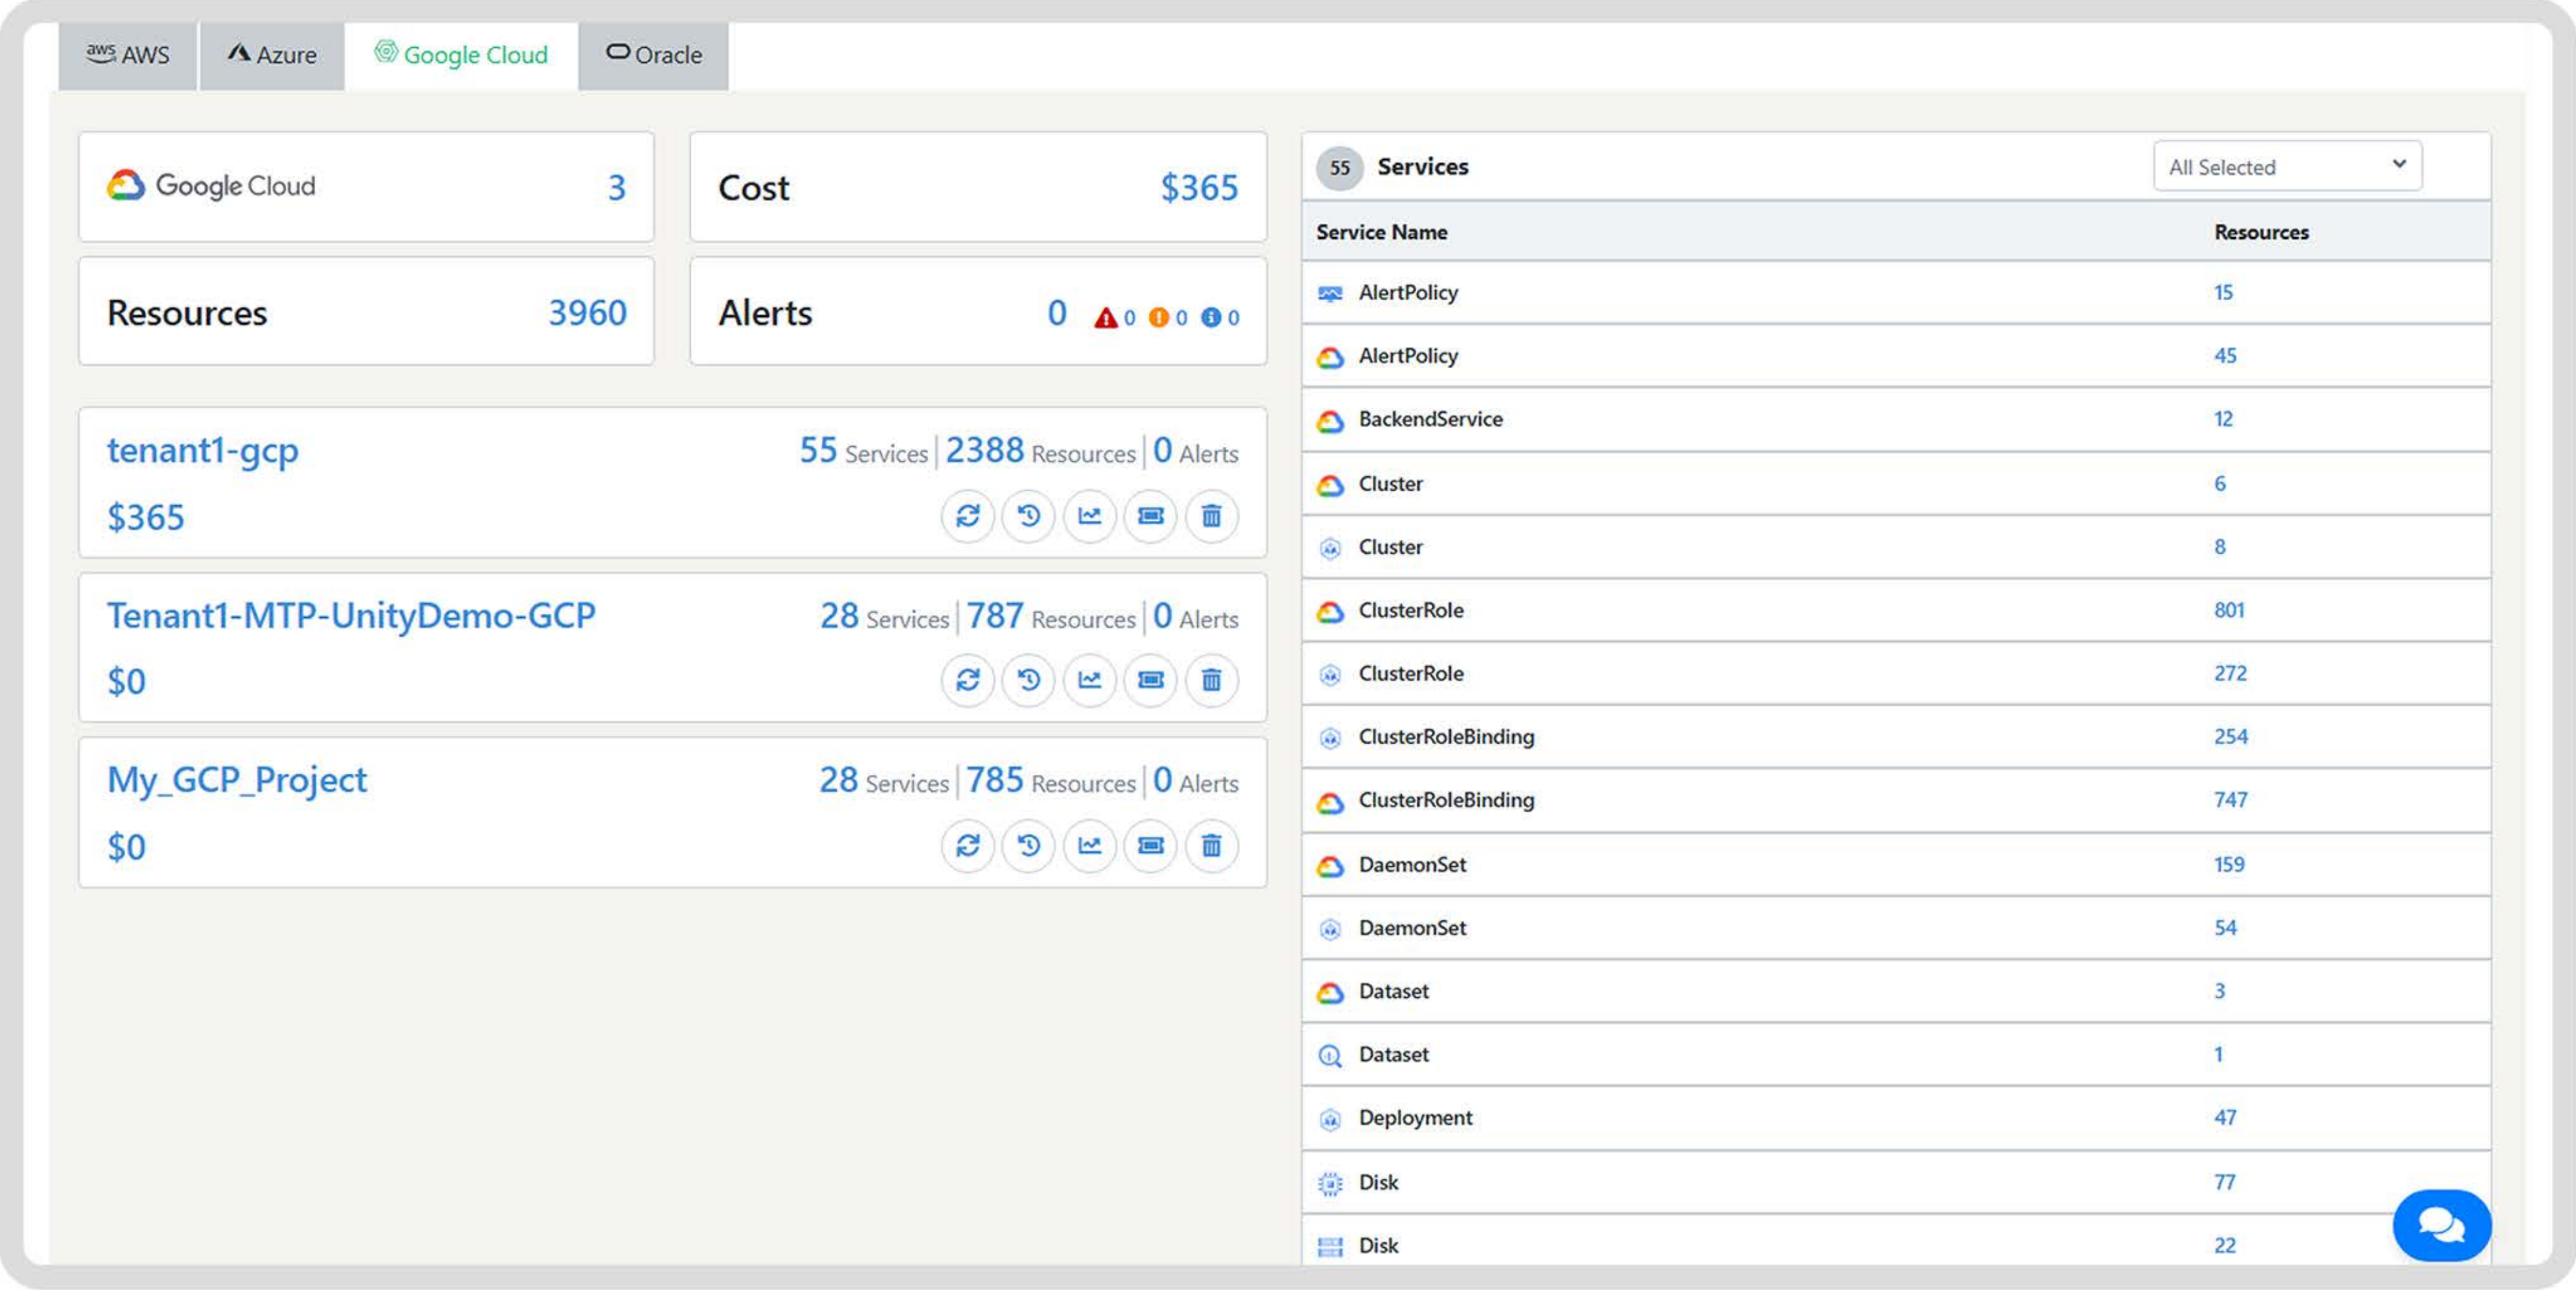

## Advanced Gen-AI Reporting

Generate smart, real-time reports using filtered operational data. UnityOne.AI delivers proactive alerts and insights to resolve issues before they impact service performance or availability.

# Cloud Observability

Experience a unified multicloud environment from a centralized platform to monitor AWS, Azure, Google Cloud, Oracle Cloud, and hybrid deployments.

## Unified Multicloud Monitoring

Consolidate monitoring across all major cloud providers through a single platform. Gain full visibility into cloud performance, usage, and health for proactive management at scale.

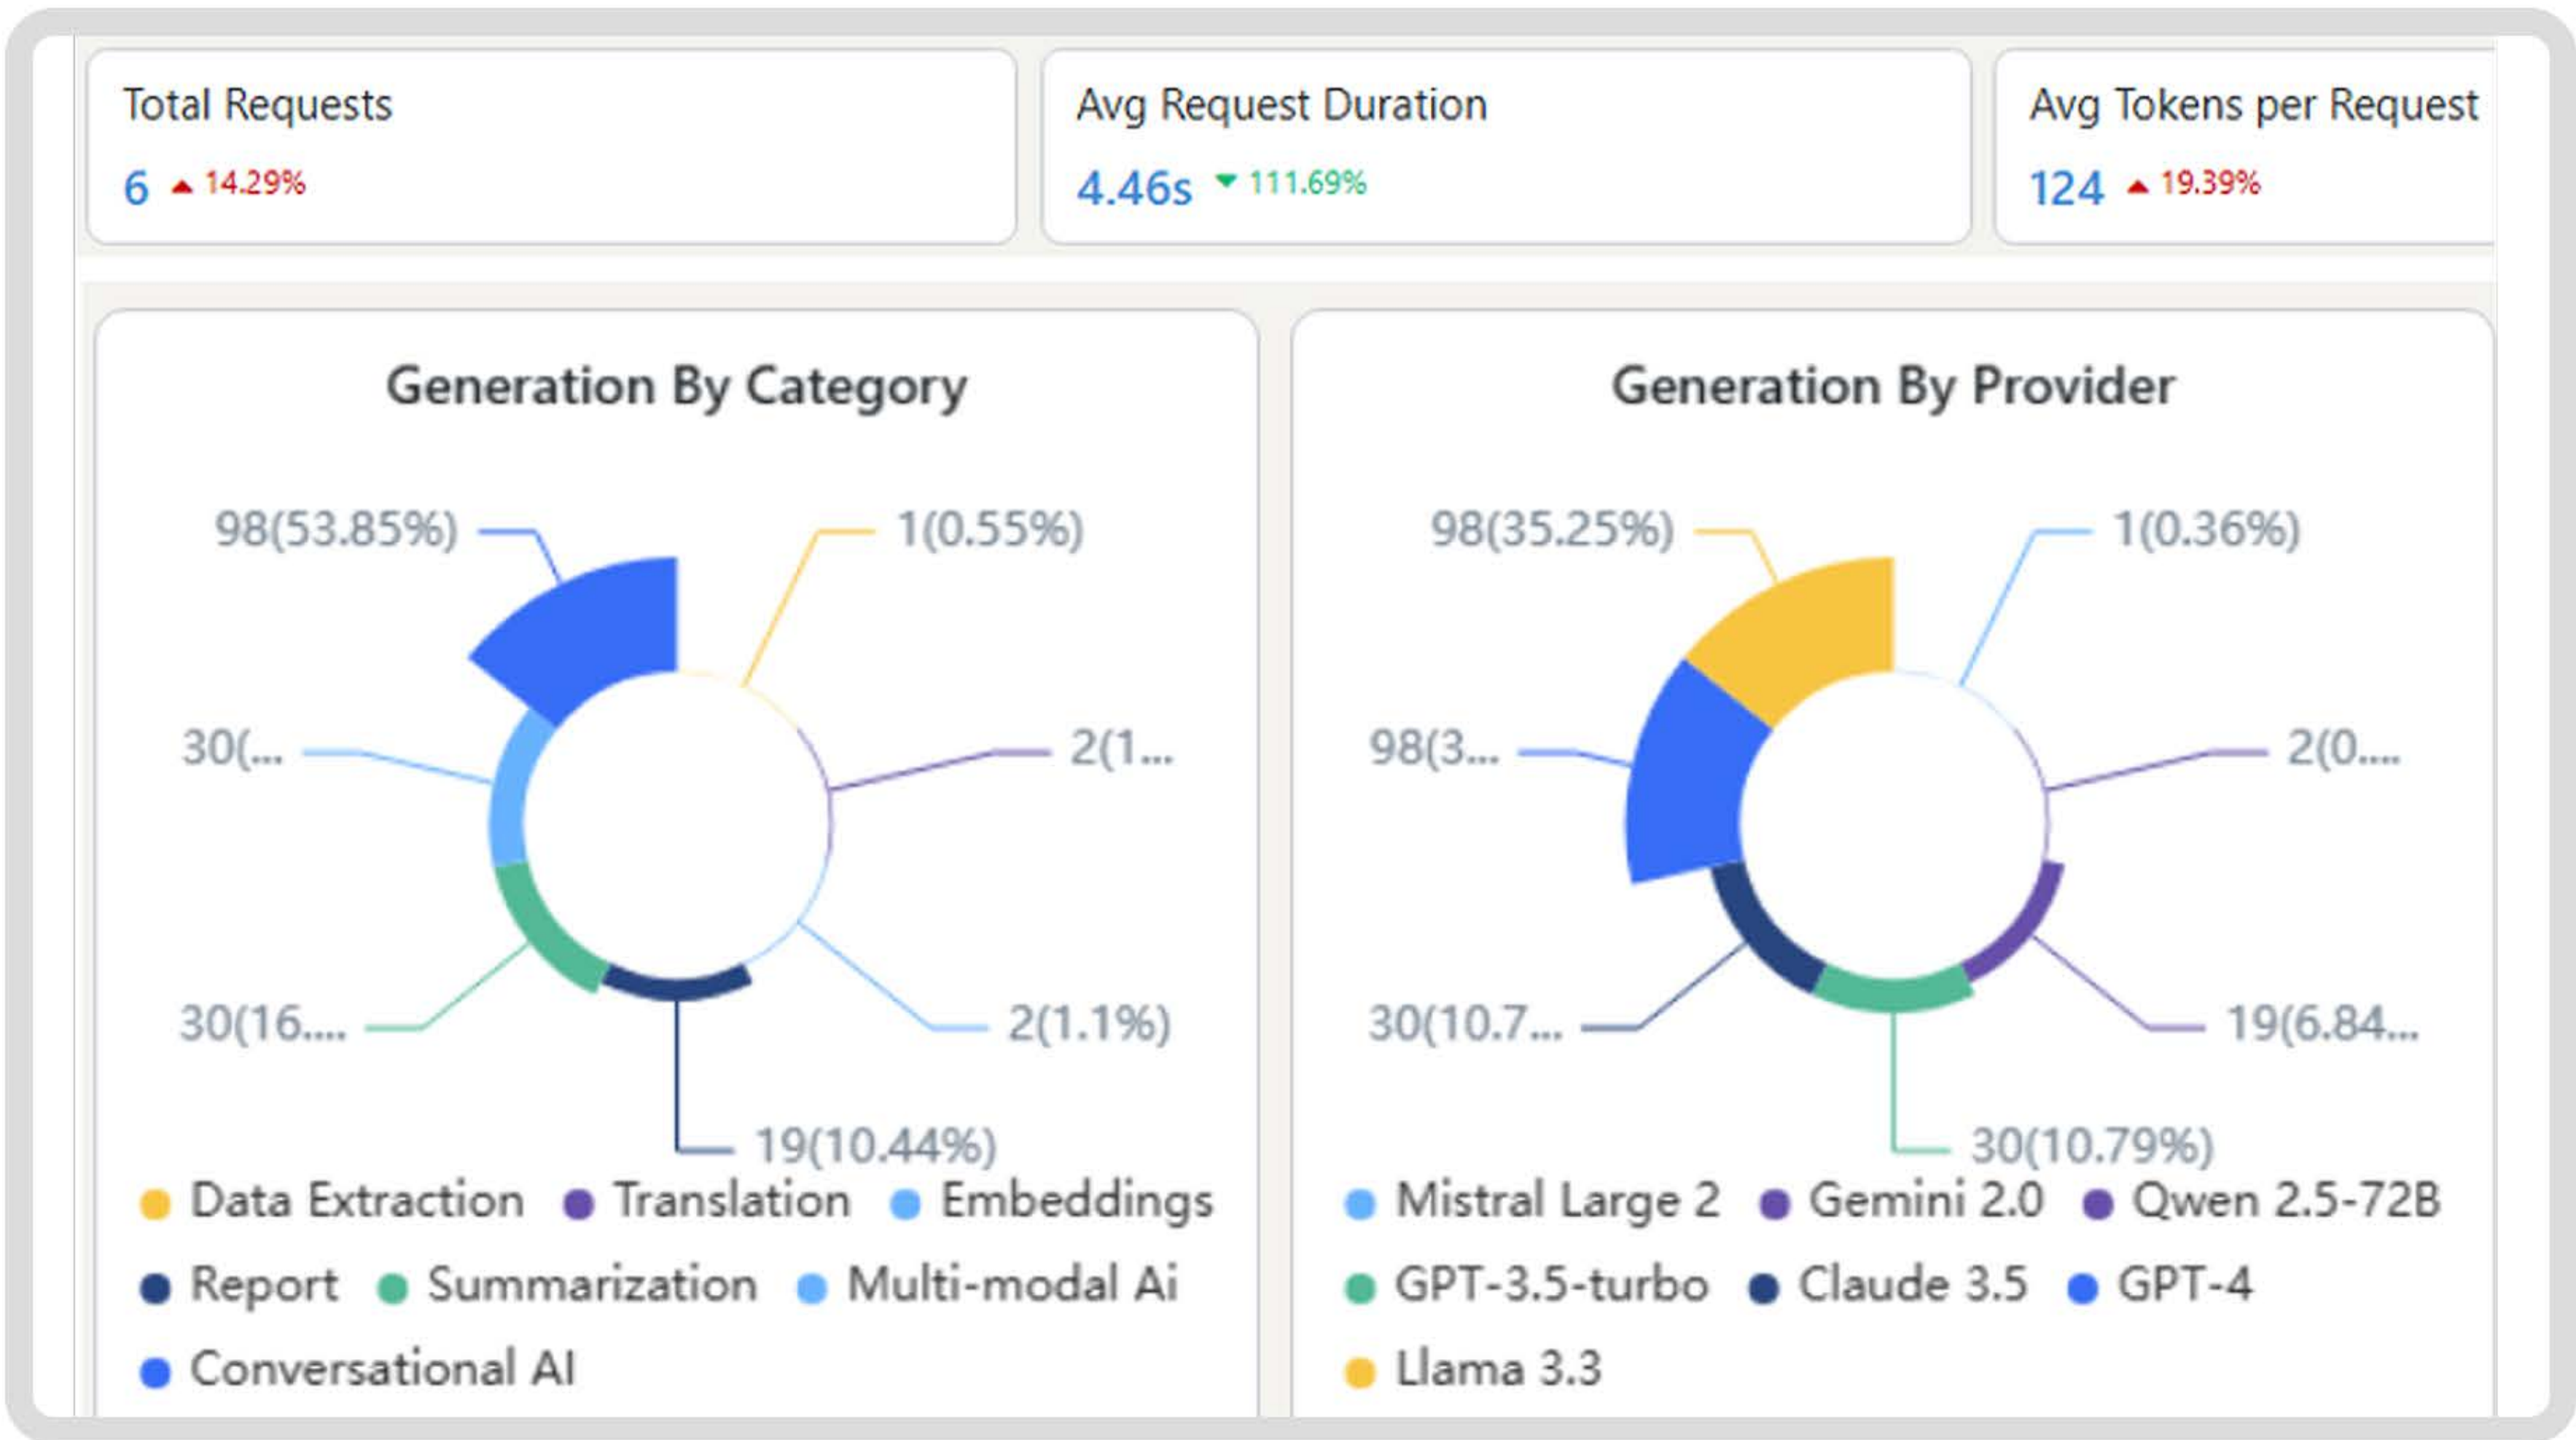

## AI-Powered Optimization

Leverage AI to right-size cloud resources, predict capacity needs, and reduce costs. UnityOne.AI continuously analyzes usage patterns to drive efficiency and performance across environments.

# AI Workload Observability

Monitor, manage, and streamline complex AI/ML workloads like GPU infrastructure utilization, private LLMs performance and vLLM orchestration.

## AI Pipeline Monitoring

Track GPU utilization, model performance, and private LLM workflows with precision. UnityOne.AI offers full visibility into every stage of the AI/ML lifecycle.

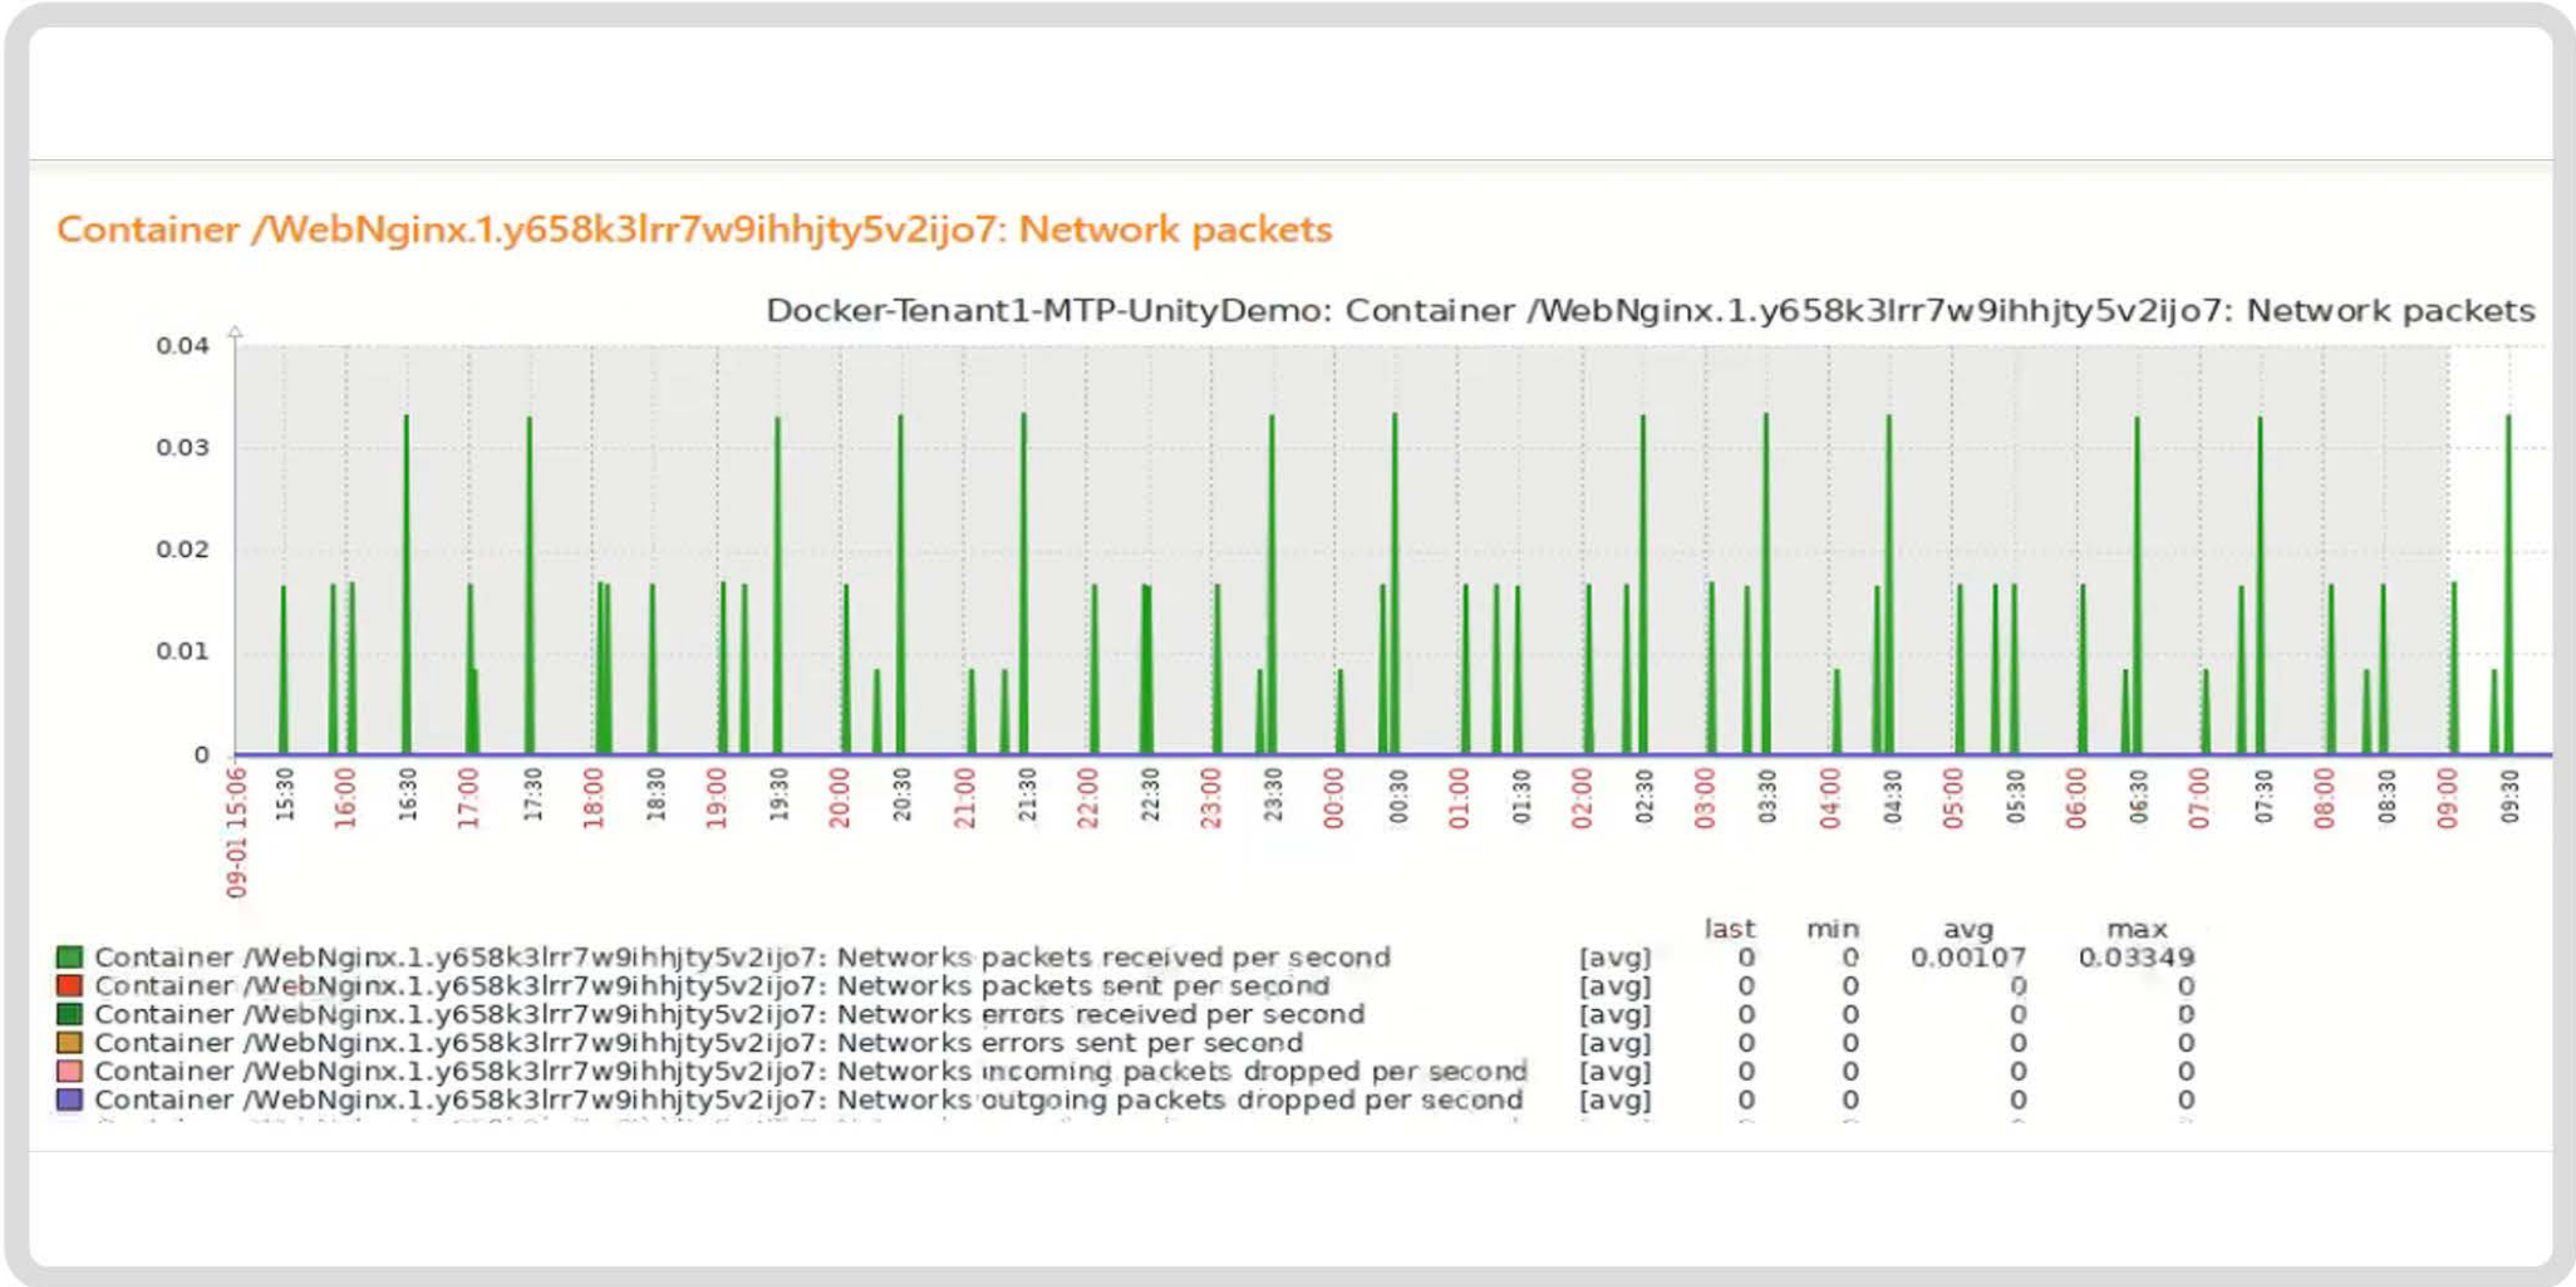

## Automated Orchestration & Anomaly Detection

Detect performance anomalies in real time and trigger automated orchestration. Maintain peak efficiency for mission-critical AI workloads with minimal manual intervention.

# Application Observability

Enhance application reliability, accelerate issue resolution, and ensure seamless user experiences through intelligent, end-to-end visibility across the entire application stack powered by LLM-based analytics.

## Application Monitoring

Gain real-time visibility across your IT operations for proactive monitoring, quicker issue resolution, and better efficiency.

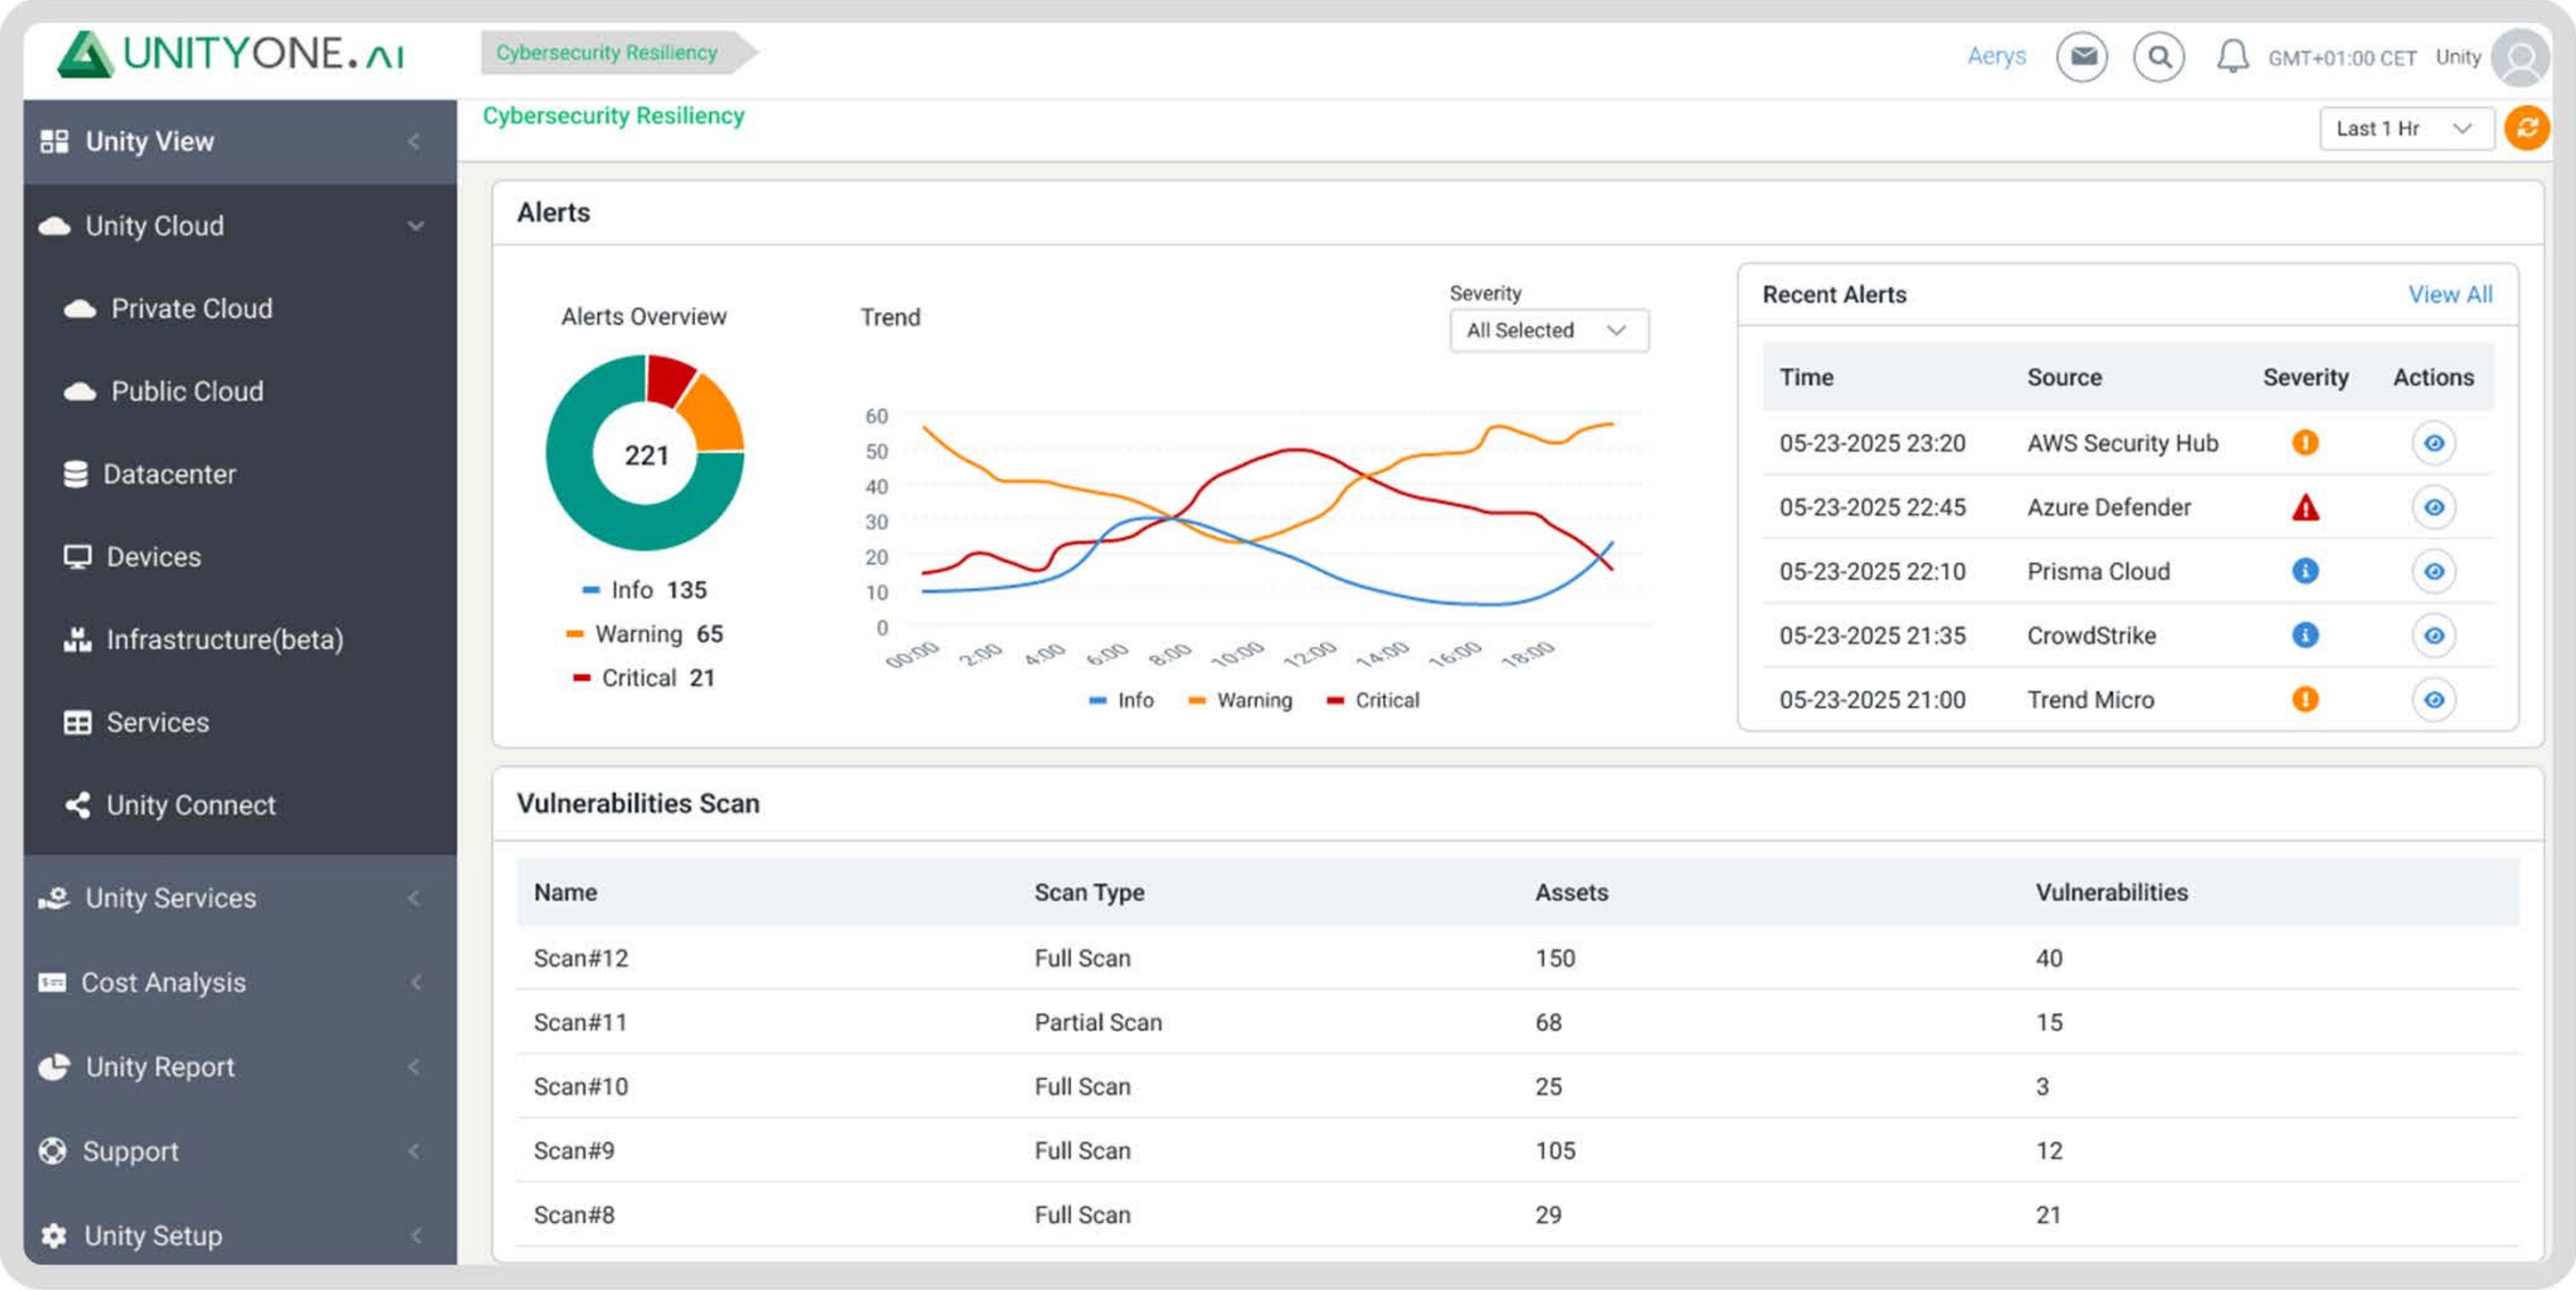

## LLM-Driven Troubleshooting

Accelerate root cause analysis with large language model-powered insights. Resolve issues faster and strengthen application resilience through intelligent, automated diagnostics.

# Security Observability

Accelerate threat detection, reduce response times, and minimize manual intervention with a centralized, AI-powered dashboard that delivers continuous, real-time visibility into risks and anomalies across your entire environment.

## Zero Trust–Aligned

Continuously monitor user, device, and network behaviour to detect anomalies. Enforce Zero-Trust policy with real-time visibility and AI-driven risk detection.

## AI-Powered Enforcement & Response

Leverage AI to correlate incidents, enforce least-privilege policies, and automate remediation. Reduce MTTD and MTTR while maintaining continuous trust validation across your infrastructure.

# Why UnityOne.AI for Observability?

**800+**  
Built-In  
Integration

**450+**  
Active  
Customers

**99.99 %**  
SLA  
Achieved

**10+**  
Global Point  
of Delivery

## AI & LLM-Driven Analytics

Go beyond dashboards - and interact with Generative-AI.

## Unified Platform

One interface for cloud, infra, app, and security monitoring

## Autonomous Optimization

Let automation handle scaling, orchestration,  
and remediation

## Built for Multicloud

Support for AWS, Azure, GCP, OCI, data centers  
and private/hybrid environments

Experience multicloud observability from reactive monitoring  
to actionable insights.
